NURSING TIMES

St IVEL LACTIC CHEESE

IS OF GREAT VALUE TO

THE DIABETIC BECAUSE

it can be consumed in any quantity, as it contains only a trace of carbohydrate.

St. Ivel is a delicious cheese, and in the case of diabetics it certainly does make a valuable and much appreciated contribution to what is often an irksome diet.

It helps to keep digestive upsets to a minimum, and enables the patient to obtain full benefit from the other constituents of a restricted diet.

NO OTHER CHEESE IS LIKE—

Codis is so much better...

...when a codeine compound tablet is necessary because all the advantages of "Disprin", which you know so well, have been embodied in the "Codis" tablet. The aspirin in Codis is in the form of soluble aspirin as in Disprin. This means that there is far less likelihood of stomach upset. The tablet disperses promptly in water, making it easier to administer, and prompt relief is ensured.

Codis is recommended for all those conditions in which a codeine compound tablet is indicated.

Codis is a compound tablet containing soluble aspirin with codeine and phenacetin

FROM ALL CHEMISTS, in packs of 20 tablets (in foil) 2/8 inc. P.T.

PLEASE MENTION "NURSING TIMES" WHEN ANSWERING ITS ADVERTISEMENTS

Taunton Hospital Management Committee

TAUNTON AND SOMERSET HOSPITAL, TAUNTON

MATRON

A vacancy will arise in the Spring of 1957 for the post of **Matron** at the Taunton and Somerset Hospital caused by the retirement of the present holder of the post.

Applications are invited from suitably qualified candidates with wide experience in the nursing profession.

This general hospital has a bed complement of 420, covering a wide variety of specialities. The salary scale is at present in the range of £850 to £1,045 less £221 for emoluments. The hospital is recognised by the General Nursing Council as a complete General Training School for male and female Student Nurses and also houses the Preliminary Training School which serves three training hospitals.

Applications giving full details of age, education, qualifications and experience, with the names of three referees, should be made by 24th November, 1956, to the Group Secretary, Taunton Hospital Management Committee, c/o Musgrove Park Hospital, Taunton, from whom further information may be obtained.

(x2368)

TROWBRIDGE AND DISTRICT HOSPITAL, TROWBRIDGE

(60 beds)

Applications are invited for the appointment of **Assistant Matron** at the above general and maternity hospital. Candidates should be S.R.N. and S.C.M. The person appointed will be required to act as Matron's Deputy.

Applications, stating age, qualifications and experience, giving the names and addresses of three referees, should be submitted to the Matron. (2348)

ECTIVE ORIGINAL

WELSH REGIONAL HOSPITAL BOARD

Applications are invited for the following appointments and should be sent, together with details of age, qualifications, training experience and the names of two referees (or copies of two recent testimonials) to the Matron of the appropriate hospital (except where otherwise stated) from whom further details may be obtained. Salaries and conditions of service are in accordance with the appropriate National Agreements.

MATRONS

RUTHIN HOSPITAL

(46 beds, including 5 maternity beds). S.R.N., S.C.M. For temporary period of approximately 12 months. Salary scale £650 x £20 (4) to £730 per annum, less a charge of £218 for board and lodging. Applications to Group Secretary, "Rhianfa", Russell Road, Rhyl.

ABERDARE GENERAL HOSPITAL

(102 beds). Applications are invited for the post of Matron of the above hospital which forms part, with Merthyr General Hospital, of a Group School of Nursing for State Registered Nurses. Applicants should be S.R.N., S.C.M., and have had administrative experience. Salary £710 x £25 (3) x £30 (2)—£845 per annum, less a charge of £219 for board and lodging. Applications stating age, qualifications and experience, with names and addresses of three referees, should be forwarded to the Secretary, Merthyr and Aberdare H.M.C., St. Tydfil's Hospital, Merthyr Tydfil, immediately.

TREDEGAR GENERAL HOSPITAL

The salary and conditions of service are in accordance with the scales and conditions agreed by the Nurses' and Midwives' Functional Council for a hospital of 50 to 99 beds, viz., £680 x £20 to £740 plus £25 to £765 per annum of which £218 will be payable to the hospital authority for a furnished flat adjoining the hospital. Candidates must be State Registered Nurses and preference will be given to those who have had administrative experience in a responsible position in a general hospital. Tredegar Hospital (within 8 miles from Abergavenny, 20 miles from Newport and 20 miles from Cardiff) is an acute general surgical unit of 50 beds for men, women and children, with 6 beds for orthopaedic cases. The hospital is a Component Assistant Nurse Training School in association with St. James Hospital, Tredegar. The appointment is subject to three months' notice on either side. Applications stating age, qualifications, and giving full particulars of previous and present posts and experience, together with the names and addresses of three referees, should reach the Secretary, Hospital Management Committee, Central Offices, Caerphilly Road, Ystrad Mynach, Glam., by 12 noon on Wednesday, 31st October, 1956.

ASSISTANT MATRONS

CEFN ILA MATERNITY HOME

Nr. USK (21 beds). Salary £570 x £20 (6) x £10 (1) to £700, less £176 board residence. Hospital in pleasant country surroundings, one mile from Usk. Good experience. Apply to Group Secretary, 64 Cardiff Road, Newport.

PEMBROKE COUNTY WAR MEMORIAL HOSPITAL

HAVERFORDWEST (163 beds). Complete Training School. S.R.N., S.C.M. Salary £550 x £15 (6) to £640 per annum, less £163 residential emoluments. Conditions of service as laid down by Whitley Council. Applications to Group Secretary, West Wales Hospital Management Committee, Glangwili, Carmarthen.

PORT TALBOT GENERAL HOSPITAL

HOSPITAL ROAD, PORT TALBOT (85 beds). This hospital is recognised by the G.N.C. as training school for nurses in affiliation with Neath General Hospital. Salary £590 x £20 (5) to £690 per annum less £176 for residential emoluments. Vacancy available 1st January, 1957. Applications to Group Secretary, Mid Glamorgan Hospital Management Committee, 8 Wind Street, Neath.

A PATIENT'S PROBLEM

NURSE, *what should I use for Haemorrhoids?*

The introduction of Germoloids has made a valuable contribution to haemorrhoidal therapy. They are clean and simple to use. They are emollient—and therefore facilitate pain-free evacuations. They counteract local infections, protecting broken, damaged tissues. And their analgesic properties rapidly relieve itching and irritation. Patients can hardly fail to be grateful to you for recommending Germoloids.

FORMULA. *Zinc Oxide 8·00%, Ethyl Salicylas 2·85%, Resorcinol 2·14%, Bismuth Subchloridum 5·71%, Rubrum Scarlatinum 0·007%, Ceresina 11·11%, Cetaceum 8·88%, Ol. Theobromatis ad. 100%*

BOOKLETS AND POWDERS BOTH INVALUABLE

How delighted we are when one of our Nurse friends takes time to write and express her unsolicited satisfaction. "Patients all appreciate your 'Hints to Mothers'", one tells us, "and of course, all agree that Steedman's Powders are still the best".

We strive to deserve the praises of our friends, for no effort is spared to maintain the high standard our Powders have achieved for generations, nor to revise and reprint our booklet to keep it up-to-date.

The New Steedman's Powders are **prepared to a modern approved prescription, which contains no calomel.** They promote gentle regularity without harmful purging.

Every Nurse agrees that our "Hints to Mothers" booklet is a most useful little production for every busy mother, dealing, as it does, with the symptoms and treatment of all baby's ailments in a simple, straightforward way.

Do not hesitate to send for a free supply of booklets if your work brings you in touch with mothers and their little ones. They are post free on request.

JOURNAL OF THE ROYAL COLLEGE OF NURSING

NURSING TIMES

Macmillan and Company Limited, London . Friday, October 26, 1956

EDITOR: MISS M. L. WENGER, S.R.N., S.C.M., DIPLOMA IN NURSING, UNIVERSITY OF LONDON

Northern Ireland Appeal Success

THE nurses of Northern Ireland have over-reached their target of £50,000 needed to ensure a secure financial basis for the work of the Royal College of Nursing in Northern Ireland. On October 20, at the Empire Theatre, Belfast, at the conclusion of a most happy and enjoyable programme recording the progress of the Appeal, H.E. Lady Wakehurst, wife of the Governor of Northern Ireland, and patron and president of the Appeal Council, handed to Miss D. Melville, M.B.E., chairman of the Northern Ireland Committee of the College, a cheque for the magnificent sum raised—a total of £53,602 3s. 10d.

★ £53,602

The occasion was a ceremony at the theatre, kindly lent by the directors, to which members of the public and representatives of all who had helped the Appeal during six long years were invited. Miss Mona Grey, M.B.E., secretary to the Northern Ireland Committee, presented *To Remind You*, a musical presentation of the progress of the Appeal, opened in 1949 under the chairmanship of Mrs. Robert Marshall, to its triumphant conclusion. It was, in fact, a glowing tribute of appreciation and thanks to all the people of Northern Ireland for their unceasing help — thanks which were expressed in the illustrated programme and spoken by Miss Grey before the curtain rose on scenes which will not be forgotten by the nurses or their friends. The audience delighted in the clever reminders of endless sales of work and jumble sales, celebrity concerts and guest teas, whist drives and beetle drives, and each year a musical show written by Miss Grey and presented with the aid of the Belfast Operatic Society and the producer and leading lady Gwen Gracey, who, as Mrs. R. A. Johnston, M.B.E., is a former president of the Belfast Branch.

Present in the audience were the Lord Mayor and Lady Mayoress of Belfast and among the guests from London were Miss G. M. Godden, O.B.E., president of the Royal College of Nursing, and Mr. A. C. Wood-Smith, secretary of the Royal National Pension Fund for Nurses; with, from Scotland, Miss J. Armstrong, vice-chairman of the Scottish Board of the College and Miss M. D. Stewart, secretary to the Board. At the close of the entertainment the whole cast of players and nurses were joined on the stage by Miss Grey and Mrs. James Mackie, O.B.E., chairman of the Appeal Council, who was herself thanked for her untiring work and enthusiasm and who thanked most warmly Lady Wakehurst for her inspired and inspiring leadership since she had followed the Countess Granville as

Right: *Her Excellency Lady Wakehurst presents the parchment scroll recording the success of the Appeal and the names of the Appeal Council members, to Miss D. Melville for the Royal College in Northern Ireland.*

Left: *in the Royal Box Miss G. M. Godden, Lady Wakehurst and Miss J. d'e Bosdari join in singing Auld Lang Syne.*

Right: *Miss M. Grey, with Mrs. James Mackie, extreme left, and some of the cast, thanking all who had contributed to the success of the Appeal.*

patron of the Appeal. Lady Wakehurst thanked the people of Northern Ireland and said how proud she felt that they had helped to raise this magnificent sum for the Royal College of Nursing. The College meant a great deal both to the individual nurse and to the nursing profession.

After presentations to Her Excellency, Mrs. Mackie and Miss Grey, the cast and audience joined in 'Auld Lang Syne' and, by another miracle of organization, individual trays of tea were brought round to all in the theatre.

In her speech of thanks to those present for their unstinted help and enthusiasm and to the hundreds of other friends and helpers not able to be there on this happy occasion, Miss Grey concluded by saying "May we, as nurses, never fail you."

TO REMIND YOU . . .

October 30 and 31. LONDON. Conference, Ward and Departmental Sisters Section, R.C.N., Cowdray Hall.

October 31. LONDON. Occupational Health Section, R.C.N., Cowdray Hall. Miss M. M. West, deputy editor, *Nursing Times*, will speak on her visit to Canada, 7.30 p.m.

Topical Notes

Northern Ireland Celebrations

WITH THEIR USUAL WONDERFUL HOSPITALITY the Northern Ireland Committee of the Royal College of Nursing and the Belfast Branch made the weekend one of extreme pleasure to the guests from London and Scotland who had been able to share in the triumphant culmination of the Appeal Fund reported above. The opportunity was taken over the weekend of seeing the lovely countryside, in autumn sunshine, visiting some of the hospitals and joining in an informal dinner party given by the executive committee of the Belfast Branch and, the next day, enjoying an Ulster high tea. The happy conclusion of the Appeal and the friendliness and hospitality shown made the weekend a memorable one. Miss G. M. Godden, president of the College, gave the inaugural address (to be published later), at the course for nurses from mental hospitals which opened at College headquarters in Belfast on the Monday morning.

Public Health Quarterly Meeting

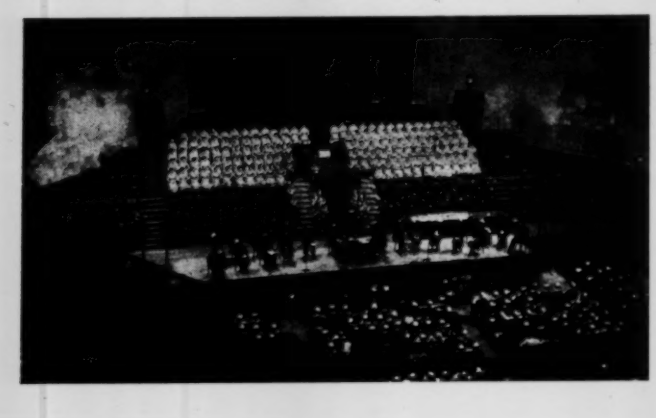
A SWIMMING POOL used as a lecture room is perhaps a little unusual in our profession. The occasion was an open conference, part of the quarterly meeting of the Royal College of Nursing Public Health Section, at the Princess Margaret Rose Hospital for Crippled Children, Edinburgh, on October 20. Mr. Robert I. Stirling, F.R.C.S.E. was talking about 'After-treatment of Poliomyelitis', while several of the young patients of the hospital were proudly demonstrating their skill in the water. Later, on dry land, they showed in striking contrast how the normal pull of gravity restricts their movements. Mr. Stirling emphasized the patients' emotional and physical benefit from the pool and their need for lengthy individual treatment with a highly-skilled physiotherapist. The conference was attended by 100 nurses; the business meeting for members of the Public Health Section had been held at 44 Heriot Row, in the morning, followed by lunch at Mackie's Restaurant in Princes Street.

Public Health Nurse Honoured

MISS EDNA L. MOORE, R.N., director, Division of Public Health Nursing, Department of Health for Ontario, was awarded the honorary degree of Doctor of Laws by the University of Western Ontario, London, Canada, at its autumn convocation on October 19 in recognition of the outstanding leadership she has given throughout her career in the development of modern public health. Miss Moore was president of the Ontario Public Health Association during 1953-54. She is known to many nurses in this country who have studied in Canada and is planning a visit to the United Kingdom and Europe next year following her retirement from the Division of Public Health Nursing.

New Teaching Unit, Edinburgh

THE NEW TEACHING UNIT at Edinburgh Royal Infirmary, will be officially opened by the Rt. Hon. the Countess of Wemyss on November 7. The unit is on the first floor of a new building overlooking the Meadows and is part of the extensive rebuilding and renovating plan now being carried out at the hospital. There is a large lecture room, four small study rooms, four offices for sister tutors, cloakrooms for tutors and students, a library and a demonstration room. The lecture room and two study rooms are divided by partitioned walls which can be opened to make a large conference hall. Tutors' offices, the lecture room and the demonstration room are connected by Dictograph;



UNITED SHEFFIELD HOSPITALS SCHOOL OF NURSING PRIZEDAY

An audience of 3,000 watched the Countess Mountbatten of Burma present medals, prizes and certificates to nurses at the City Oval Hall, Sheffield, on September 21. (Report later.)

ST. MARY'S HOSPITAL ON TELEVISION

THE first of three B.B.C. programmes to be televised from St. Mary's Hospital, Paddington, appeared on the screen on October 18. The broadcast took the form of a documentary, showing the story of a patient from his first contact with the hospital as a new outpatient to his admission as a case of gastric ulcer and the first visit of the consultant under whose care he had been placed. It was a model of what the hospital service should provide. Presumably the patient came by appointment and as soon as his papers had been made out he was conducted in friendly fashion to the right clinic by the porter and, after a short wait while the previous patient's visit was concluded, was seen in the consulting room, giving his history and being examined. He was given the provisional diagnosis, reassured about the good results of treatment which would probably require admission as an in-patient and directed to the X-ray department to make an appointment for a barium meal. How excellent if all patients in all hospitals had so little time wasted in waiting!

Next the patient was seen in the X-ray department where the radiologist greeted him and explained fully what was required of him; there was some light so that the patient was not left either physically or mentally in the dark. How easy it is for the radiologist to become so used to working in a dim light among complicated apparatus that he forgets how strange it is to the patient entering from a brightly lighted room and not knowing what to expect, where to go or what discomfort he may be subjected to. The X-ray results were shown and the presence of a large ulcer confirmed.

The last scenes showed the nurses arranging the pillows and bedside equipment about a week later and the patient coming to get into bed. Again he was fortunate, for the nurse had only time to make him comfortable and provide him with magazines before the consultant was there drawing up a chair. He examined the patient and explained the treatment and the importance of mental relaxation and the way he took his meals and feeds, in addition to the rest, diet and the medicines he would be given. He assured him that there was every hope that the ulcer would heal with treatment especially if he had no worries about his home and work; he reassured him however that, should this not be so, surgical treatment today, with all the advances of modern methods, gave most satisfactory results in such cases.

It seemed perhaps a little unreal, but to the patient the accent on his privacy and understanding approach to personal problems must have given him confidence at the beginning of his stay in hospital.

This programme could not but reassure viewers should they or their friends and relatives require hospital treatment. The average layman has inherited some of the fears of the older generation to whom hospitals were places to which people went to die rather than to be cured and he has always the natural fears of the unknown. Such programmes by making known the service that a modern hospital can give, and the courtesy and understanding with which it can be given, should help everyone.

One of the shots from the B.B.C. television documentary by courtesy of Radio Times.

The Local Authority Mental Health Services

by T. G. RANKIN, B.A.,
Senior Psychiatric Social Worker, Birmingham Public Health Department.

THE work of a local authority in the field of mental health can conveniently be described under three headings, and though this paper deals with only one of them, the preventive aspect, it must be remembered that the other functions are of equal importance.

First, there is the ascertainment of ineducable mental defectives and the supervision of mental defectives outside institutions, of whom there are approximately 55,000 living in the community. The majority of them are high-grade defectives who work and live a normal existence, but because of their defect in intelligence they are more likely than an ordinary person to get into various kinds of social difficulties, so the local authority provides a service to supervise and help these defectives in their homes. For the low grade defectives, occupational centres are provided which aim at teaching them simple skills, not with a view to their ever working or earning a living but rather to keep them occupied and happy while they are there and give their families some respite from the full-time job of caring for a low-grade defective at home.

Secondly, there is a service which is responsible for investigating, and instituting appropriate action under the Lunacy and Mental Treatment Acts, the situation of persons reported to be of unsound mind. This is the work of the duly authorized officer. It is difficult and responsible work, requiring resolution to tackle patients who are sometimes violent and unco-operative, but more generally requiring sympathy and tact both for the patient and relative, for whom the situation can be most distressing. In a city like Birmingham approximately 100 patients are removed under an order to a mental hospital each month, and of these between one-third and one-half are over 60.

Size of the Problem

I now come to the preventive mental health services which are the subject of this paper. Here we are dealing primarily with mental illness rather than mental deficiency, and I would remind you of some facts that will give an idea of the size of the problem.

150,000 patients are in mental hospitals.

40 per cent. of these have been there before and at present there is 16 per cent. overcrowding.

One child in every 19 born will spend some part of his life in a mental hospital, while one in 12 will suffer a nervous breakdown.

Three million people suffer from handicapping neurosis, and psychological maladjustment in adult life is responsible for 30 per cent. of absenteeism.

40 per cent. of all Army discharges during the last war were on psychiatric grounds.

In these circumstances it is not difficult to make out an important case for prevention, which may mean trying to reduce the incidence of mental illness or reducing the relapse rate or lengthening the period of remission. It may also mean preventing some patient from getting so bad as to require hospital treatment.

Mental illness may take many forms and it is generally agreed today that in most cases there is a multiple causation. Among the important causes are:

1. An inherited predisposition.
2. Some emotional disturbance in childhood.
3. A present stress situation.
4. Some physiological factor.

The preventive mental health services of a local health authority are concerned with the emotional problems of childhood and the stress situation in an adult which tends to aggravate and sometimes to precipitate mental illness in a person already predisposed.

The normal maternity and child welfare services of the health department, though primarily concerned with the physical health of mothers and young children, are to-day becoming increasingly aware of their mental health role, which is to try and prevent emotional disturbance by helping mothers with the many problems and difficulties that arise. To mention the commonest, there are the difficulties over feeding, weaning and toilet training, the problem of sibling jealousy, of a child that suffers with night terrors, bed-wetting or temper tantrums.

Parent Guidance Clinic

To help mothers with these difficulties Birmingham has developed a special parent guidance clinic which has the usual child guidance team of psychiatrist, psychologist and psychiatric social worker, and there the most difficult problems of the under-five are referred. In most other areas the child guidance clinic of the education department treats emotionally disturbed children whether of school age or under. There are, however, advantages in having a separate clinic for the under-fives as part of the local health authority's services, because it depends mainly on the health visitors and welfare superintendents for referrals and it can serve as a kind of psychiatric in-service training for health visitors. The psychiatric social worker from the clinic visits all the welfare centres regularly and is available to discuss problem cases which the health visitors bring to her; the health visitors also have easy access to the clinic and from time to time receive lectures and seminars from the clinic staff.

Among the stresses of adult life, overcrowding and inadequate homes are common problems which can affect mental as well as physical health. Sometimes whole families have to live and sleep in one room. This means that the children's sleep is disturbed, there is no privacy, and it is no wonder that nerves and tempers become frayed; all this can have a very disturbing effect on young children. Then there is the problem of sharing a home, often with in-laws, where the friction and conflicting loyalties may undermine the marriage and the mental health of one or both partners.

In Birmingham new tenancies are given under a complicated and very comprehensive points scheme, which includes a certain maximum of points that can be

Abstract of a lecture given at a refresher course for matrons and chief male nurses working in mental or mental deficiency hospitals, at the Royal College of Nursing Education Centre, Birmingham.

awarded on health grounds. The mental health grounds of several hundred families have been investigated during the last few years, and follow-ups of a small number whose rehousing had been very largely due to strong mental health grounds confirm the impression that this can be quite an important preventive mental health service.

Today most large cities and county boroughs are in the early stages of developing their preventive mental health services, so that at the present time there is no uniform pattern in the country as a whole and not all the services that I mention here are available at present in Birmingham.

Mental Health Advice Bureau

Some cities have established a mental health advice bureau. This at first sight may not appear to be of much importance, but there is still a surprising amount of ignorance even among professional people regarding mental illness and the various services which are available to help as well as the provisions of the Lunacy and Mental Treatment Acts. It is surprising how many people think that if they agree to a relative being certified he or she will of necessity be shut away for the rest of their lives. Prejudice and fear make the situation worse. People are ashamed of mental illness and often try to keep the fact hidden. Here the mental health advice bureau can do useful work reassuring many people and advising others of the service most appropriate to their particular problems.

Other authorities have developed clubs for mental patients living in the community. Some may be attending outpatient clinics for treatment, while others discharged from hospital require after-care. One of the commonest difficulties experienced by mental patients is shyness and the difficulty in mixing, particularly with people of the opposite sex. At the same time, like everyone else, they want love and friendship, and feel miserable because they seem powerless to escape from their loneliness. In these clubs they have no need to feel different or inferior because they know that the others are in similar circumstances to themselves. The success of these clubs depends on a wise selection of the people referred and on the availability of trained personnel who have a real flair and enthusiasm for this kind of work.

Sheltered Accommodation

Another need of mental patients which arises from difficulty in mixing and getting on with other people is sheltered accommodation either in selected lodgings or in hostels. These would be of particular help to patients who had responded well to treatment in hospital but had no welcoming home to return to. There are others in the community, some of them epileptics, who have been rejected by their families and who, because of their disability, find it extremely difficult to find sympathetic lodgings, and this is a serious hindrance to their living an independent and self-supporting existence.

Earlier in this paper mention was made of the fact that of all patients admitted to mental hospitals under an order, between one-third and one-half are over 60. In the case of many of these there is no previous history of mental illness and all they are suffering from is the senile dementia of old age. Much has already been written on this subject, and it is understandable that both patients and relatives should feel unhappy that so many have to end their lives as certified patients in mental hospitals. The fact remains however, that these old people are not fit to be left on their own all day and it is doubtful whether any place or institution, no matter what it is called, which is set aside solely for senile patients would be much of an improvement. What is required is a strengthening of the services which help to keep these old people in their homes. Already local health authorities are using special health visitors and home helps for this purpose.

The Day Hospital

Another interesting development is the day hospital. Here it is proposed old people may be cared for during the day, returning home at night to the care of their families. This will take a large part of the load off the family, save hospital beds and keep the old people still at home in the familiar surroundings where they are happiest. Local health authorities would help with transport and liaison between the patient's home and family and the centre. A start on these lines has already been made at a mental hospital in Birmingham.

Arising out of the experience gained in a wartime service designed to help rehabilitate Servicemen who had broken down in the Forces, most local authorities are developing a community and after-care service under Section 28 of the National Health Act. Birmingham, which was one of the first cities to set up a psychiatric social service, now employs three psychiatric social workers and four social workers, and I will now describe the work of this section under the headings After-care, Community Care, and Preventive Work with Problem Families.

After-care

Because of the overcrowding of mental hospitals and because of the high relapse rate, it is important that everything should be done to keep patients out of hospital as long as possible. With a significant number of patients there are difficulties in the home environment which may have played an important part in bringing on the illness and, being still there, may bring about an early relapse—domestic tensions between husband and wife or parent and child, employment difficulties, worry and anxiety over debts or housing, and neighbourhood and social difficulties which tend to make the patient feel an outsider. Other patients, because of their illness, have lost confidence and perhaps now, in addition, feel ashamed because they have been in a mental hospital. In all these cases a trained psychiatric social worker can do a great deal to help the patient keep well and take his or her place once again as a normal citizen in the community.

In Birmingham there is an average of 200 patients each month entering and leaving the four city mental hospitals. Of these the majority are voluntary patients. It is not practical to provide an after-care service for all of them and the chief difficulty lies in the selection of the right cases which will benefit. Here, as everywhere else in the health services, efficiency depends on the co-operation of hospital, general practitioner and local health authority service.

Community Care

The bulk of the cases carried by this section, which is called the Psychiatric Social Service, come under the heading of community care, and here a variety of very different cases are catered for. With some the service required is information rather than treatment, whether medical or social: individuals inquiring about the various kinds of psychiatric treatment available in the city, sometimes for themselves but more often for a relative. Seldom, though, do they require a simple statement of the facts; often they need reassurance and the relief and support that comes from sharing a problem with a sympathetic listener. Others need help to reach a difficult decision, and most

inquiries of this kind will require home visits by the social worker so that a first-hand picture of the patient in his home circumstances can be obtained. Later, many other statutory and voluntary agencies may be approached on behalf of a client to ensure that he gets the help that his situation requires. And so, what started as an inquiry about treatment will develop into a case where many other necessary and relevant social problems are brought to light and a solution found through the mediation of the worker and her liaison with other agencies.

Nor do all these inquiries come direct from the patient or relative. The majority come from other agencies—disablement resettlement officers with the Ministry of Labour who find difficulty in placing psychiatric cases in employment, children's officers who have applications to take children into care because of the medical state of the parents, probation officers whose cases seem to behave in particularly abnormal ways, National Assistance Board officers who wonder whether this or that applicant for assistance is work-shy or ill. Here the psychiatric social worker works as a mental health filter to the other agencies, investigating each case and reporting back to the referring agency. Some of these patients will be taken on for social treatment, some will be referred to other agencies such as training or rehabilitation centres, while yet others will be recommended to a mental hospital or clinic for treatment. In cases where treatment appears to be necessary the worker will discuss this with the patient's general practitioner, and when there is doubt or when some special treatment at a centre outside Birmingham is required, arrangements will be made for the patient to be seen by the consultant psychiatrist of this section.

It may be asked how it comes that this section has a part to play in the normal procedure whereby patients who appear to need specialist treatment are referred by their general practitioner to a clinic or hospital. The fact is that there are quite a few patients who, because of their nervous or mental illness, are afraid of doctors and hospitals and some in addition are afraid to go out except at night. Often these unhappy people remain at home for months and months, bringing in neither sickness nor unemployment benefit, nor even National Assistance allowance. Many patients in these circumstances have been helped by a psychiatric social worker. Sometimes many visits have to be paid to the home before the patient's confidence is won sufficiently to enable him to go out, and that is likely to be only the beginning. Possibly for months, occasionally for years, the process of rehabilitation treatment may go on, and during all this time the worker will play an important part in supporting the patient and his family through the numerous setbacks that may occur.

A Hopeful Outcome

The following example, which is typical of many, will give a better idea of the kind of case work involved. Mr. X is married and has four children. His wife went to the Citizens Advice Bureau, who passed the inquiry on to the psychiatric social service. He was not working, refused to go out or to see his doctor, and because he seemed quiet and different from his old self, she thought that he was suffering from a mental illness. A visit was made. The home was found to be a normal working-class home, reasonably clean and tidy though the furniture was shabby. The patient was at first suspicious and withdrawn, but gradually he thawed and became a little more friendly. He was a man of superior intelligence, who had been quite well until about three years previously. Since that time he appeared to have gone to pieces, changing his jobs every few weeks, losing time when at work, remaining at home in between jobs so that often the family income was reduced to only family allowances. There were a large number of debts, many of them pressing, and the patient had become extremely irritable. He was obviously tense and depressed and he felt guilty because he had let his family down, and he refused to go to his doctor because he felt he would think him a fraud.

After a few visits his confidence was won and, in the meanwhile, the situation had been discussed with his doctor and arrangements made for him to draw National Health Insurance and National Assistance benefit. An appointment had also been made for him to see a psychiatrist and, as a result of this, he was asked to go into hospital voluntarily. He was only prepared to do this, however, if he knew that everything was all right at home, which was threatened not only by debts but by sickness. Eventually, the patient went to hospital where he remained for six months. During this time many visits were paid to the home and many crises dealt with, any of which might have caused the patient to take his discharge. Eventually he returned, obviously much better and full of confidence that from now on all would be well, but within a few weeks there were clear signs that he was relapsing and within two months the possibility of further treatment had to be considered. However, after a few more weeks of frequent visits and much support he began to pick up and he has now worked regularly for a year and the family situation has been transformed.

The worker played an essential role in all three phases of this case—at the initial stage during which rapport was established and the situation diagnosed, during the treatment stage where the wife and family needed much help and support, and during the after-care period. In the 18 months that the case remained open 48 visits were paid to the home.

Problem Families

Preventive work with problem families may at first seem out of place in a local authority mental health service. However, a recent investigation into the intelligence of 100 consecutive neglectful mothers sent under a court order to the Mayflower Training Centre for Neglectful Mothers, found that 4 per cent. were imbeciles, 20 per cent. feeble-minded, and 43 per cent. dull and backward. It would, however, be a mistake to conclude that most problem families are due to mental deficiency. The majority of mental defectives under supervision in the community manage to look after their homes sufficiently well not to be considered in any way as social problems. If extreme immaturity and impulsiveness and failure to learn from experience are symptomatic of psychopathic personalities, then the majority of the fathers of problem families come under this category.

The most important reason, however, for including work with problem families in the mental health service is the fact that, if left unsupported, they are in grave danger of breaking up either through court action on a charge of neglect or through eviction on account of arrears of rent, or because of disruptive forces within themselves, and it is now generally accepted that broken homes which involve separation of young children from their parents can have a damaging effect on the developing personalities of young children.

Problem families are the chronic failures of the normal social services. They have been much worked upon by a host of visitors and welfare officers of a number of services, but their condition remains unsatisfactory and precarious. Their homes are dirty and lacking in many essentials, clothes and bedding are inadequate, children dirty and sometimes verminous, often gas and electricity have been turned off because of unpaid bills and broken meters, there

are numerous debts and the rent many weeks in arrears. The man's employment record in the majority of cases is often extremely bad and over long periods the wife may have to exist on an income which is not only irregular but less than National Assistance. She is probably of well below average intelligence and has to look after a family two or three times as large as the national average in a home overcrowded and lacking in modern conveniences. Not surprisingly her health is poor from malnutrition, insufficient rest, and too frequent confinements. Nor can she expect support from a husband who is too often a liability.

Under such conditions it would be surprising if much affection and respect remained between the parents, and yet, in spite of frequent and sometimes violent quarrels, in most cases neither consistently wants a separation. Under such conditions it is not surprising that the mother's morale sinks to zero, so that she has no heart left to make her home a clean and pleasant place. What is surprising is the fact that, in spite of the appalling superficial appearance which suggests the contrary, the great majority of these parents care for their children in a warm though immature way, and because of this the home is worth preserving and it is right that society should be prepared to go to great lengths to help the parents so that they, in turn, can help themselves and their families.

Reviewing the many and varied services which I have outlined in this paper, some may think that the function of a local health authority mental health service are unimportant and peripheral. To jump to such a conclusion would in my opinion be a mistake, and although the most important advances in the treatment of mental illness are likely to come from further research and new forms of treatment in hospital, at the same time there is little doubt that the services which are designed to get patients out of hospitals as soon as possible and keep them out as long as possible, have a tremendous contribution to make and are likely to receive more and more attention as time goes on.

INTERNATIONAL CONFERENCE AT MUNICH

Industrialization and Social Work

by MARION K. KNIGHT, S.R.N., S.C.M., H.V.CERT.

THREE thousand delegates from 55 countries attended the International Conference of Social Work in Munich from August 5-10. The theme was *Industrialization and Social Work—Industrialization and its effect on Social Work for Family and Community.*

Much preparatory work had been done by those responsible for organizing the conference, but the major burden had been shouldered by the German National Committee. One was impressed and appreciative of the careful thought and attention to detail, by the presence of numerous English- and French-speaking 'guides' and by the large number of friendly helpers.

Nearly 40 countries had submitted national reports to the conference committee. Dr. Heinrich Braun had prepared a summary of the development of social policy in Germany and the effects of industrial development. A copy of the monograph, printed in three languages, was given to every delegate.

The conference headquarters were in the new Ausstellungspark (exhibition grounds). Here were large halls, offices, exhibitions of books, photographs and other material, a post office, bank, coffee stalls and restaurant and many other amenities.

Meetings of the conference fell into three main groups: three plenary sessions, open to all delegates; four commissions consisting of specially appointed experts, and 20 study groups open to all delegates. In addition visits to institutions of various kinds had been arranged, film shows in three languages were available and a number of specialist meetings and social events had been organized.

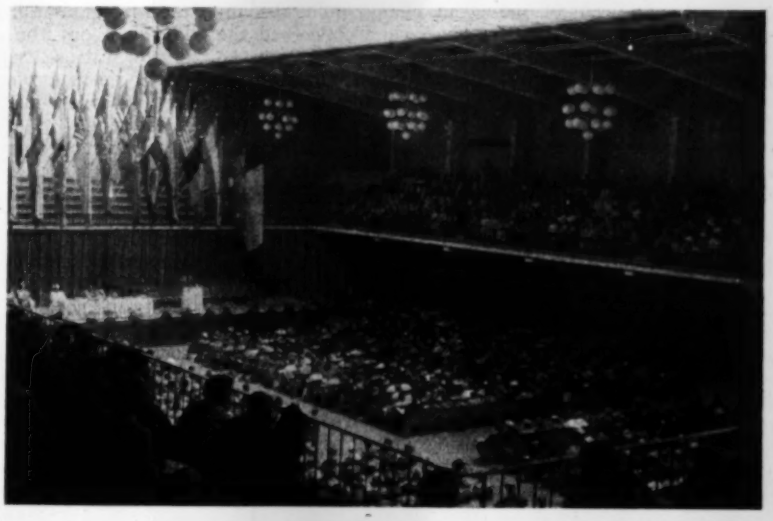
Every day an information bulletin was available in three languages for every delegate. This gave notice of additional arrangements, alterations, special meetings and general information. Each day, summaries of the previous day's addresses were available in three languages. A final masterpiece was the preparation and distribution of the findings of the 20 study groups, written in three languages.

During the three plenary sessions six reports were presented as follows.

1. Impact of industrialization on mental attitudes, on ways of life and on the life of the family:

(*a*) in communities highly industrialized over a long period (report given by Professor R. M. Titmuss, Great Britain);

(*b*) in recently industrialized communities (report



Right: *the scene in the Congress Hall in the Ausstellungspark, Munich.*

given by Miss J. Henderson, United Nations).
2. Social work and industrialization:
(*a*) new tasks in relation to industrial and family life (report given by Father G. H. Levesque, Canada);
(*b*) new tasks in the developing structures of community life (report given by Mrs. Hansa Mehta, India).
3. The distribution of social responsibility:
(*a*) how to preserve the right balance between the responsibilities of industry, state and voluntary agencies (report given by Professor Hans Muthesius, Germany);
(*b*) the role of social work in plans for industrial development (report given by Mr. Charles I. Schottland, U.S.A.).

Industrialization and the Family

One of the most outstanding reports was undoubtedly that of Professor Titmuss. He said that the world of today was increasingly an industrial world and dominated in its values and goals by problems of economic growth. Economic growth spelled a higher material standard of life. Industrialization as a means of raising the level of living was thus something to be desired. The fact that a substantial part of mankind, compared with only an insignificant fraction at the beginning of the century, was aware or was becoming aware of the benefits of industrialization was one of the most important facts in the contemporary social scene when looked at in international terms.

We were witnessing on a wider scale than ever before a demand for change, the motive force for which lay in the idea of progress, material progress, the idea that ruled the life of Britain in the 19th century.

Professor Titmuss went on to say that social work was, first and foremost, an activity carried on in industrial, urban societies. The problem of human needs and relationships with which social work had traditionally been associated had had, in scale and concentration, their origin in those societies experiencing the impact of industrialization. Looking to the future, and to an increasingly industrialized world, more social workers would be needed along with a greater investment in those social resources without which social work could not effectively fulfil its ethical responsibilities.

Professor Titmuss said that while he did not intend to discuss the more material environmental aspects of industrial change in relation to family life, he did wish to comment on two related factors. One concerned the rate (or speed) of industrial change and the intensity of the demand for it; the second concerned the distinction between the long-term as compared with the immediate or short-term effects of industrialization, as they had been experienced in Western societies. Both factors seemed to be highly relevant in any consideration of the life-cycle of the family, particularly in those societies now starting out on the road to industrialization. If the desire for change was widespread and intense and if there were possibilities of rapid industrial development, then it was likely that the family problems arising from change would be obscured by the prospects and promises of a rising standard of living. The social costs of economic advance might thus be pushed out of sight by the strength of the collective motive for an improvement in the material fabric of life.

Much depended on the pace of change. There were limits, particularly in relation to child-rearing practices and family adjustment, to the speed at which social change could take place without causing grave psychological problems. If those who were first subjected to industrial change had a stable childhood, spent within a coherent, meaningful social order, then they might be able psychologically to withstand the pressures of change. It would be their children and grandchildren who might be more likely to show the full psychological effects of the long-drawn-out processes of industrializing society.

The Price of Economic Growth

In such ways as these the long-term and more subtle psychological effects of industrialization were worked out in the family. They were part of the price of economic growth, a price that was not paid by those who benefited most in material terms from increased production, and a price which was not revealed until several generations later.

Professor Titmuss went on to say that viewed in terms of the long cycle of family life, the violent industrial upheavals of the 19th century, the poverty, the unemployment, the social indiscipline, the authoritarianism of men and the cruelties to children were by no means as remote today in their consequences as some historians and economists would have us believe.

He referred to thefore going as effects of the first industrial revolution and said he wished to consider next some of the effects of the second industrial revolution. The first was marked by the triumph of the steam engine, of coal and iron, and by the shifting of production from the home to the factory. The second has been distinguished by an immense and varied spread of production techniques dominated by the invasion of the factory by electric power. Work had increasingly been split into smaller sub-divided tasks by the demands of standardized mass production; human labour itself had come to be increasingly ruled by the clock, by the precision of the assembly line, the conveyor belt and automation. The need for manual strength and long hours of work had been reduced by the development of mechanized processes in which the machine tended to regulate and control the work. This process of technological change, in itself a major factor in raising the standard of living of the worker, had been aptly described by Friedmann as making industrial man an *object* of nationalized production. The degradation of the worker, bereft of personality and of his roles as husband, father and citizen, found unconscious expression in the idea of 'scientific management'.

Focus on the Manual Worker

Much had been written of the effects on the family of the first industrial revolution in the west, much less was known about the more subtle social and psychological effects of the second industrial revolution, yet these effects might be as profound in their own way as the more obvious consequences of the shift from domestic to factory production.

The movement of ideas since the 1930's had led to many studies of the worker within the social system of the factory. One weakness, however, of most of these studies (like the famous Hawthorne inquiry) was that while taking account of the realities of life within the workplace they ignored the realities outside. In none of the indexes of such studies consulted did 'family' appear. Industrial psychologists and sociologists seemed to observe only a part, and a steadily smaller part, of man's life in highly industrialized societies. The studies were also focused primarily on the manual worker. The effects of industrialization on the white-collar worker and middle classes were no less important, but required separate discussion.

Professor Titmuss said that he had been particularly struck by differences in the norms of behaviour expected of the worker in the factory and of the same worker

Right: *simultaneous translation during the conference overcame the barrier of language.*

(though in other of his roles as husband and father) in his home and in the community. Many of them seemed to be fundamentally in conflict—for example, a 'good parent' was one who, by taking deliberate thought for tomorrow, provided a stable background and a regular coherent rhythm in which his children could grow and mature as 'successful' individuals. He was expected to plan for their future, to contrive a stable, economically secure base from which they could climb. For the manual worker in the factory, however, the concept of stability was not an important attribute to the system, theoretically or in practice. The dominating characteristic of industrial conditions in the west during the last few decades had been, from the viewpoint of the worker, its irregularity and impermanence. Unemployment, short-time working, redundancies had all spelt irregularity and uncertainty. Allied to this was the irregularity and uncertainty of status and skill. Old skills were being down-graded, divided or made redundant. Loss of status signified more than loss of rewards, more than loss of respect. It could be a serious injury to the personality.

The industrial worker's status was more likely to be an ascribed or assigned one than that of the middle-class worker's which was an achieved or promoted one. The first tended to decline or remain static with advancing age; the second tended to rise, with incremental rewards, to higher levels of accorded respect. Thus security for the manual worker declined as he grew older (particularly as he could no longer look to a large family for support) whereas for the middle-class worker it increased, yet both workers, as husbands and fathers, were subject to the same expected norms of behaviour in society. Both were expected to have the same status relationships and to play the same roles in their own families. There was here a fundamental conflict in values, the dimensions and consequences of which could not yet be seen.

The need for secure status, for continuing respect by others, increased as the cruder necessities of material existence were met. To win a bare level of subsistence was no longer a sufficient reason to be accorded respect by one's fellows and by one's wife and children. The need for the status became more of a family need as the idea of partnership in marriage grew, and as increasing emphasis was given to the rearing of children as 'successful' personalities.

'Dis-initiative'

Professor Titmuss then said that another major characteristic of industrial techniques in relation to the goals of workers and its effect on family life was, briefly, that the progressive substitution of work regulated from the outside for work more or less freely shaped by the worker himself was one of the chief characteristics of contemporary industrial evolution. Where the worker was dominated by the machine, by work schedules, by time-study checkers, by pace-setters, by the clock, it could all signify submission, dependence, 'dis-initiative'; judgement, selection, initiative, the ingredients of skill, the basis of self-respect, were not called into being.

How did the worker react to these effects of modern industrial techniques and to the apparent conflict in values and norms of behaviour? If workers did not respect themselves and did not feel that they were being accorded respect by their fellows in the factory, might they not tend to feel that they were not fulfilling satisfactorily, in the eyes of their wives and children, their roles as husbands and fathers?

In the eyes of the farm worker's child and the child in many middle-class and professional homes, father played a comprehended and admired role in his work. What of the child of the industrial worker on the assembly line, who had little conception of his place in the scheme of things? Consider the effects on the wife, would she not be affected by his sense of failure, his feelings of frustration, by the irregularities of his rewards and status and by the unlikelihood of his advancing as they grew older?

Family and Community Problem

Insofar as modern industrial techniques led to feelings of personal dissatisfaction, to a dispossession of personality, the problem thus became a family and community problem. If relief and compensation could not be found at work, then the worker's home life was likely to be influenced and changed in many subtle ways. Insofar as he turned to his home as an outlet it was arguable that two different and opposed patterns of behaviour might develop. One might take the form of submissiveness, the culture of the factory. Or he might react in an authoritarian and punishing way to the domination of the machine by attempting to dominate others. Or he might genuinely find new sources of satisfaction in his own home, in the running of his home and in the business of family life.

Professor Titmuss said in conclusion that he did not believe that the problem of human relations in industry "can be entirely solved within industry itself. It cannot be solved by tying closer the bonds between employer and employee, through the provision of miniature and occupational welfare states. Nor can contemporary problems of family life be entirely solved within the family itself. The family does not function in a social vacuum." How it functioned was profoundly affected by the forces of industrialization. Its responsibilities had grown, it had been placed in more situations of divided loyalties and conflicting values; it had been constantly subjected to the gales of creative instability. It was in this context that the social services had to be seen in a variety of stabilizing, preventive and protective roles. Interpreted in this way, and not as the modern equivalent of Bismarkian benevolence, the social services became an ally, and not an enemy, of industrial and technological progress.

To reformulate the philosophy of social policy and to rescue it from its present inhibitions derived from a

welfare state ideology was one of the major tasks of the second half of the 20th century.

* * *

Excellent addresses were also given by the other speakers, some being in the nature of surveys and factual reports. Simultaneous translation into English, French and German was available.

The Work of the Commissions

The four commissions, composed of specially appointed experts from a number of countries, studied the following questions.

1. How less developed countries can benefit from the experience of countries highly industrialized over a long period.
2. The impact of industrialization on urban and rural life; how to confront the outstanding problems which arise, for example through overcrowding in urban areas.
3. The protection of family life within an industrial society.
4. The role of social work in schemes for social security.

Masterly summaries of the work of the commissions were presented on the last day of the conference.

Commission 1 believed that the main lesson to be learnt from the west was the need for co-ordinated socio-economic planning. The under-developed countries had the complication of foreign investment. The commission felt that social provision tended to lag behind economic development and that this would be very serious if it occurred in the under-developed countries.

It was believed that it was urgent to educate workers for the special needs of the countries in which they were to work.

Commission 2 felt that new agencies must be created to meet new needs as they arose from the effects of industrialization. It was suggested that orientation to social welfare should be included in courses for administration and that social work schools should also train for social leadership.

The commission put forward two recommendations—one calling on the United Nations to undertake studies and research with regard to the allocation of national income; the other urging national committees of the International Conference of Social Work to press their governments to support ECOSOC and for the establishment of special funds.

Commission 3—no new or special points raised.

Commission 4 felt that the concept of social security must not be limited to some stratas of society only. It was found impossible to generalize about establishing priorities in the development of social security schemes—for example adequate income, health and housing were so closely related. Each individual country must decide its priorities in respect of individual needs. The commission felt that the specialist social worker should be used as a consultant; that all services and personnel should be fully used—other professions must be called upon, but these professions should have an orientation to social work.

It was suggested that the role of social work was:
to understand how to help individuals to use available resources;
to understand attitudes of human beings; and
to be able to work with families and groups.

It is not possible here to enlarge on the many other conference activities—the reception given by the Bavarian State Government at Schloss Schleissheim; the 'Bavarian Night' arranged by the City of Munich; the visits to hospitals and other social institutions; the meetings of national and international groups and the general busyness each day.

Over and above all the addresses and formal discussions one realized how invaluable is the opportunity given by such conferences of meeting social workers from other countries and, indeed, from one's own.

It is of the greatest importance that representatives of the nursing profession should participate in conferences of allied professions as much as possible. Social workers and public health nurses in particular should keep *au fait* with each other's plans and with developments in the social scene.

[A report of the study groups and the study tour by Miss H. M. Simpson will appear in the *Journal for Industrial Nurses*.]

THE NAME IS THE THING

by E. DORAN, S.R.N., S.C.M. H.V.CERT.

THE recommendation of the British Medical Association's Annual Representative Conference at Brighton that a health *visitor* should be called a health *nurse* requires attention. Why should a representative meeting of members of the medical profession approve such a suggestion? Could it be that the medical profession which has had to comprehend so much that is new within its own bounds has not yet been able to adapt itself to and accept change and growth in an allied profession which must bring about changing relationships between the two?

The doctor brought up in the traditional school feels at home and supported by a nurse. Has he not worked with nurses as subordinates for seven or more years, nurses in hospital who carried out the doctor's orders without question, nurses on the district who were prepared to co-operate with him in the care of the patient on the same terms as the hospital nurses? These nurses who accepted the doctor's verdict on the patient's care as the last word not only helped him to look after his patients but also added to his self-confidence. They were competent and caring and skilful yet their dependence on medical direction was absolute. A doctor working with such handmaidens was bound to get a certain amount of reassurance of his own worth by the contact.

But this other colleague, this health visitor, where did she come in? A doctor shouldering the heavy responsibilities of general practice could not be immediately ready to discuss the care of his patients with and even to accept advice as to their social needs from a medico-social worker. Social workers had their place in hospital but, again, that place was clearly understood. The use of the old word 'almoner' was continued into the present time because it was a title that gave some clue to their function.

The almoner had no connection with either the diagnosis and treatment of disease or with the nursing care of the patient. This health visitor was a fully-qualified nurse and she had had a special training in public health. It was difficult for any doctor to know just how to place her. There might be a danger that she would come between a doctor and his patient in a way that a nurse would not. Would it not be much better to have a woman worker, whose basic qualification for her job was her training as a State-registered nurse, called a nurse so that the doctor-nurse relationship could go on undisturbed? With a health nurse or a public health nurse at call a doctor would not feel the same anxiety that a health visitor—whose title implied special qualifications—tended to arouse.

That wish on the part of the doctors to change the name 'health visitor' to some other in which the word 'nurse' would come, must surely arise from considerations such as these. The actual achievements of health visitors since they were first appointed under the direction of a medical officer of health in 1890 are told in all tables of vital statistics published since 1900 and are surely known to all doctors. The desire of the doctors to have a health visitor called a nurse could not be really due to an underestimation of a health visitor's work.

There are considerations, however, which make the relationship between doctor and health visitor at the present time open to misunderstanding. To begin with it was not until 1928 that health visiting became firmly recognized through statutory regulation as a branch of nursing. Possibly the general practitioners between 1890 and 1930 accepted the visitor who called to advise the expectant and nursing mother without question. She was just a specialist in infant feeding attached to the local authority's child welfare centre and did not really interfere with, or even meet the doctor much. Whether or not she was a nurse was a question which did not arise. There were many unqualified health visitors appointed after 1928 and indeed it was not until the Public Health Section of the Royal College of Nursing and the Women Public Health Officer's Association established a joint working party to consider the duties of the health visitor in the National Health Service that there was a general acceptance of nurse training as a basic qualification. Here there arose the first difficulty: the health visitor was a nurse and yet was outside any doctor-nurse relationship with the general practitioners in the domiciliary field.

Health Visitor's New Role

The lack of a common relationship did not become noticeable, however, while the health visitor's function was still restricted to the advice and care of the mother and the child. It was not until after the war, in 1945, when statistics began to show that the health visitor had possibly worked herself out of her original job, and when post-war conditions brought to light the many maladjustments with which she could help, and the need for suitable workers to give positive health teaching, that her work widened to bring her into touch with the members of all families in her district. Then the general practitioner began to hear more about the health visitor and to wonder what she was doing visiting the homes in his district and giving advice on health matters to his patients. Times of actual meeting and discussion were infrequent and much damage could be done to understanding and good relationship, however unwittingly, by the spoken word of a third party.

Recognition of a medico-social worker as a family visitor has caused more attention to be directed at the working relationship between such an all-purpose family visitor and the family doctor. The Working Party Report on Health Visiting (paragraphs 317-318) makes it clear that the health visitor, while she will base her work on the advice of medical and social experts, should exercise her own judgement in applying it to her work with families. In this, there is not that familiar doctor-nurse relationship to which the general practitioner has been accustomed when being assisted by other nurses in the care of his patients. "She (the health visitor) will accept the clinical judgement of the doctor in charge of a case but it will be for her to decide how to adapt and time her health education to meet his clinical requirements and to recommend what social action may be desirable . . . She is qualified to be an adviser . . . and to provide information on physical, social or psychological matters on which clinical judgements can be confidently based."

This half-way position of the health visitor between the specialized social worker and the doctor is difficult for the doctor to understand and where there is lack of understanding there is inevitably suspicion and with suspicion there comes hostility and an urge to belittle the worker. Gradually, as doctor and health visitor develop their services to each other and by co-operation endeavour to ensure a comprehensive health service for the families in the district, a better understanding by the doctor of the health visitor's function will develop,

An Experiment in Belfast

Just outside Belfast an experiment is being tested in the practice of one general practitioner. For a time a trained social worker who had been working on research in the Department of Social Medicine was seconded to a general practitioner with a rural practice of about 2,000. At the end of six months the social worker was withdrawn and on the recommendation of the professor of social medicine to the county medical officer her services to the general practitioner were replaced by those of the health visitor who was already working in the area. The health visitor and doctor meet once each week. The doctor and the social worker had found that in the rather small practice there were few cases referred requiring only social investigation and social rehabilitation but in working with the health visitor the doctor has found that many a matter can be discussed involving medical as well as social conditions.

Extension of co-operation on such lines as this is bound to bring about better understanding. The modern doctor-nurse concept can no longer be one of subordination but one of mutual respect and close co-operation and on this platform the relationship of doctor and health visitor is being built.

The nursing profession too requires to reassess the value of the health visitor to the profession. It was fortunate for nursing that the health visitor was retained within the fold—she might quite easily have joined the ranks of social workers outside the profession had it not been for the leadership which obtained acceptance of State registration as a nurse as the basic qualification for health visitors in 1928.

Just as in her daily work the health visitor brings about a co-ordination of the health and social services so, at a level where policies are developed, the health visitor within the nursing profession can facilitate contacts with other professions concerned with the provision of health and social services to the community. The nursing profession needs the health visitor. Statutory safeguards of her title have not been lightly won and the profession can have little sympathy with the recommendation passed by the British Medical Association's Annual Representative Conference that the name should be changed.

THE LONDON HOSPITAL

Portrait of a Hospital in its Third Century

Above: *1875. The London Hospital in its late Victorian setting.*

AN historical word-portrait of The London Hospital, soon to celebrate the bicentenary of its Royal Charter of Incorporation (1757), has been written by Robert Sinclair and has just been published*. Since its humble beginning in a house bought for 100 guineas and staffed by a married couple for £20 a year, this famous hospital has trained some of the most brilliant and distinguished men and women in medicine and nursing.

Eva Luckes, appointed matron in 1880 at the age of 24, had at first to choose her nursing staff from the "cleaner and more sober" of a crowd of women at the hospital door who " hoped to earn a shilling or two by a night's 'nursing'." She introduced a two - year training course and fought the authorities continually for better conditions for her nurses. To make nursing respectable, stern ideas of service and sacrifice had to be implemented, and as one of her nurses said of her, she " thought it was quite an unforgiveable sin for a nurse to marry ". A reflection of the combination of traditional ideas of service and modern ideas of nursing life is seen in that today second and third generation students — daughters and granddaughters of 'Londoners'—are training at the hospital

**Copies obtainable from the House Governor, The London Hospital, Whitechapel, London, E.1, 2s. each.*

Below: *a view of the Talbot ward as it was 50 years ago.*

Right: *The London Hospital today.*

and the wastage during training is well below half the average for the whole country.

The great number of people associated with the London Hospital will treasure this little book which, while recounting the hospital's structural growth, retains a theme throughout that "the vital force which keeps a hospital going is neither a set of rules nor a stock of equipment but the climate of thought of the men and women who are working in it; nowhere is personality more important."

Book Reviews

Foundations of Nutrition

(*fifth edition*).—by Clara Mae Taylor, PH.D., Grace Macleod, PH.D., and the late Mary Swartz Rose, PH.D. (*The Macmillan Company, New York: London Branch, 10, South Audley Street, London, W.1, 42s.*)

The fifth edition of this excellent book has been written by three American nutritionists who have set out to describe the fundamental principles of human nutrition, from basal metabolism to the more practical study of constructing adequate diets for all members of the family at a reasonable cost. In the historical introduction a most interesting account is given of the early work carried out by such famous chemists as R. Boyle, J. Priestley and Antoine Lavoisier in their endeavours to establish the relationship of nutrition with basal metabolism. This is followed by photographic illustrations of modern equipment and methods employed to assess the basal metabolism in hospital.

Readers will find the details of these procedures very instructive; more especially when we learn that as a result of these investigations diet in disease has been completely revolutionized. Some readers may remember the old adage to 'starve a fever' and in consequence we also remember the weak, emaciated bodies of patients with typhoid fever. Today a nourishing and adequate diet is given to all patients suffering from febrile conditions and the weight loss is very small; weight may even increase in some cases of long-standing illness.

A good team spirit is shown by the authors' admiration of nursing skill in the following extract from the book: "It is perfectly extraordinary how much food can be given to fever patients by a good nurse, she studies the likes and dislikes of the individual patient, she seizes opportunities at night to feed the patient and above all she uses tact to achieve an adequate intake of food."

The estimation of human energy required to perform certain activities can be seen by a glance at the tables.

The discussion upon the causes and treatment of obesity is sound and practical; emphasis is placed on the fact that we inherit our bodily framework, but not our body weight. This is under our own control and obesity can be treated by a carefully planned diet.

Water constitutes two-thirds of the adult body weight, therefore the foundation of water in maintaining health is fully explained, and for those who would like to know whether drinking with meals is harmful to good digestion, the following extract will help to dispel any doubts: "The average drinking of water with meals will promote the secretion and activity of the gastric juices and the digestion and absorption of food."

The minerals and vitamins required in a normal diet are all well illustrated and many photographs are given of laboratory animals, in whom deficiency diseases have been produced for experimental purposes. The value of fresh fruit and vegetables in the daily menu is particularly emphasized.

The grouping together of all the protein foods as possessing common properties essential to good health is a new and more simple way of teaching nutrition than many other methods, as is also the explanation of the place that fats and sugars occupy in our daily diet.

The last section of the book gives a detailed account of the nutritional requirements of people in all age groups, which are now, of course, universally accepted figures. An appendix contains a wide range of weight tables and dietary allowances.

I feel that here is a book which will contribute a wealth of up-to-date information to students of nutrition in all English-speaking countries.

Public Social Services

Handbook of Information (*10th edition*).—*The National Council of Social Service, 26, Bedford Square, London, W.C.1, 10s. 6d.*)

This 10th edition of *Public Social Services* should be a very useful textbook for those engaged in any branch of the health or welfare services. There has been a complete social revolution since 1917, when the first edition came out, both in the scope of public welfare and in its administration, and a great deal of development since the ninth edition in 1951.

This book brings law and custom completely up to date. It begins with a history of the evolution of the public social services. It is difficult to realize that in 1888 the revenue and expenditure of local authorities was only £45,000,000 and that of the central government £1,000,000, but in 1952 it had grown to £992,000,000 by

the local authorities and £560,000,000 by the central government, which is itself an indication of how the scope of the services covered by this book has enlarged.

The public social services of our welfare state cover every side of life. The book details the duty of the State and its obligations in each of the different services—health, education, housing, etc.—and all the factual information as to which section is responsible for any given need and how to obtain the source required.

The book is excellently paragraphed as to subject matter, and if the index, which was not contained in the proof reviewed, is a good one, it should be possible to turn up anything with the utmost ease. A great deal of the information in the book can be found in other handbooks, but it is certainly easy to find in the way this one is arranged, from actual welfare rights to availability of libraries, museums, music, entertainments or information services.

Scientific Film Review

Vol. 2, No. 1, April 1956. (Scientific Film Association, 164, Shaftesbury Avenue, London, W.C.2, 3s. 6d.)

Members of the nursing profession may or may not be familiar with the work of the Scientific Film Association whose journal is the *Scientific Film Review*, issued six times in the year. Briefly, " the Association exists to study, discuss, publicize and advocate the use of scientific and industrial films ". Medical films will, naturally, be included in the former group.

The April number of the *Scientific Film Review* announces a new publication policy which will give readers information of the activities of the Association, and of developments in both the production and application of scientific and industrial films. Its contents cover a wide field: there are reports of three addresses, one relating to industrial film-making, a second to the use of films in medical illustration, and yet another on photography in physics and underwater research.

Besides information on the current activity of the Association there is a section of reviews and appraisals of 32 films, the majority of them relating to medicine, public health and social welfare.

Finally there is a list of medical films 1954-1955, which brings up to date the information contained in the Scientific Film Association Catalogue of Medical Films, and also a key to distributors of medical films.

The editorial informs readers that three of the six annual publications will be similar to the April issue; the remaining three will deal with films on specific subjects.

Films have a definite place in our nursing schools and tutors will find much of help in this publication in selecting visual aids to supplement other methods of teaching.

The Hand of the Potter

—The exp riences of Nel and Peter Motte *whose baby was born a Mongoloid. (Cassell and Company Limited, 37-38, St. Andrews Hill, Queen Victoria Street, London, E.C.4, 8s. 6d.)*

This interesting book will certainly gain the reader's sympathy for the authors—two intelligent, devoted parents whose first and only child (Richard) was a Mongolian imbecile.

The book was primarily written " in the hope that others, similarly placed, may derive some help from the authors' experience, some comfort from the knowledge that the problems are shared ". And this is probably where the book fails. While the reader will have every sympathy with Mrs. Motte and her husband, the impression gained is that the situation is over-dramatized, and that there is a little too much self-pity. Parents at present coping adequately with similar problems, and often with children who are as troublesome at night as during the day (Richard only gave his parents one wakeful night in several years) might likewise be tempted to indulge in self-pity. The book rather suggests that the only satisfactory care eventually for these children is that of the mental defective hospital. No love and care for these poor unfortunates can ever replace that of their parents, and it would be tragic if any parents caring satisfactorily for a mentally defective child, might, after reading this book, be persuaded to send the child to hospital.

The real value of this little book, of this touching story told alternately by the mother and father, is the insight it gives into the parents' emotional reactions, and the difficulties which they experience in solving problems and reaching decisions concerning their child. This is a book which every nurse working in the mental deficiency field would do well to read. It would certainly help her or him in the difficult task of trying to give comfort and reassurance to parents of mentally defective children, and to view the problems and anxieties of these parents with more sympathy and understanding.

Diagnosis and Treatment of Diseases in the Tropics

(third edition).—by H. C. Trowell, O.B.E., M.D., F.R.C.P., *(Baillière, Tindall and Cox, Limited, 7 and 8, Henrietta Street, London, W.C.2, 12s. 6d.)*

This book is one of Ballière's series of elementary tropical handbooks for the use of students in tropical and subtropical countries. The author in his preface to this third edition says: "the work of diagnosis and treatment must often be undertaken by those who have not had the full training of a doctor, be it nurse, dresser or any willing and intelligent person. It is for these that this volume is intended and the fact that three editions have been published over the past 16 years indicates that it fulfills a need."

Much revision has been necessary since the last edition in 1945. There are completely new sections on children's diseases, on drugs and prescriptions and on poisons, and in all sections treatment has been brought up to date. Many useful diagrams and simple illustrations help to explain the text and assist the diagnosis.

This book is admirable for its purpose. Descriptions and instructions are simply and clearly given and cover practically any condition likely to be encountered in tropical or subtropical countries.

SETTING UP A TUBERCULOSIS CARE COMMITTEE IN ABERDEEN

by M. MONICA BYRNE, S.R.N., H.V.CERT., H.V.TUTOR CERT.,
Hon. Secretary, Aberdeen Tuberculosis Care Committee.

TO some readers it may seem surprising that until 1955 Aberdeen, despite its position as the third largest city of Scotland, its good record in the field of local authority services, and its possession of more than the average number of voluntary associations, had no tuberculosis care committee. In Scotland, however, there is no tradition of care committees for the tuberculous, and indeed Aberdeen set up the third such committee in the country.

Tuberculosis is a numerically smaller problem in the North East of Scotland than in some parts of the country. Nevertheless, in 1954, 228 new cases were notified, and in 1955 the figure was 204, and in all there are at present in this city of 186,000 inhabitants some 1,890 known cases of tuberculosis.

The First Steps

The need for a care committee having been appreciated by those working in the field of tuberculosis (both local authority and regional hospital board), informal discussions were held between representatives of the British Red Cross Society, the regional hospital board, and the public health department. The British Red Cross had long had a very active and practical interest in the welfare of the tuberculous in Scotland and, indeed, ran the two very well equipped and efficient Deeside sanatoria until 1955, so any discussion of this kind was well within their competence.

The result of this informal meeting was a decision to set up a care committee, and invite representatives from every organization in the town.

To develop and stimulate public interest an article was published in the local daily papers by the medical officer of health, Dr. I. A. G. MacQueen, and the chest physician, Dr. Douglas Bell. The article was entitled 'Close the Gap in the North East Fight with Tuberculosis', and was set out with an attractive photograph of a handsome man being X-rayed by the photogenic radiographer of the local mass miniature radiography unit. The services available to the tuberculous were fully described: the responsibilities of the local authority for prevention by means of health education, the abatement of overcrowding, BCG immunization, and the supervision of milk supplies; the facilities offered by the regional hospital board for clinical, radiological, and bacteriological examination; the work of the local authority in contact tracing and so on. The financial picture was fully drawn: free hospital treatment; free medical and nursing care at home; the special allowances from the National Assistance Board; the help offered by the Ministry of Labour in resettlement, and the powers of the local authority to help by lending nursing equipment and bedding and by supplying extra nourishment.

The article went on to point out that superficially the service appeared reasonably comprehensive, with no gaps for voluntary help to fill except perhaps to provide luxuries; but that in reality there were many such gaps. The sort of practical examples quoted included families needing help with removal and furnishing expenses on being rehoused, with hire purchase commitments, deferred payments to debtors on being approached by a recognized body, help with holidays, and the friendly visits offered by such a committee.

The joint authors were well known both to the public, and to the editor of the paper who gave his support very readily, and the article was timed to appear just before the calling of the inaugural meeting.

The medical officer of health and the senior chest consultant undertook to send out letters of invitation to this meeting to all organizations in the city likely to be interested. These included such bodies as the Women's Voluntary Services, the Rotary Club, the Round Table, business and professional men's and women's clubs, the Soroptimists, the Federation of University Women, the Junior Chamber of Commerce, the Townswomen's Guild and so on. Also invited to attend the inaugural meeting were representatives from the Scottish Office of the National Association for the Prevention of Tuberculosis. These were the secretary, Miss Hume, Dr. Murray from East Fortune Hospital, who had pioneered in this field in Scotland by setting up the first care committee in his own area, and Mrs. J. F. Wilson, a social worker who had just completed a piece of research into the problems of the tuberculous in the Edinburgh area.

Formation of the Committee

At this stage the draft constitution was prepared by the medical officer of health, modelled on the suggested constitution of the National Association for the Prevention of Tuberculosis but with a slightly strengthened local authority representation. Under this constitution the objects were the prevention of tuberculosis and the continuous care of tuberculous patients and their families. In such care the committee's practice would be to attempt to provide complete medical and social rehabilitation rather than mere temporary relief. The committee would aim at being a centre of public enlightenment on the control of tuberculosis and would be empowered to collaborate with the research and education work of the National Association for the Prevention of Tuberculosis.

The voluntary nature of the committee was emphasized, and membership was open to all interested persons. The medical officer of health, the chest physician, and any almoner, social welfare worker or health visitor devoting the greater part of her time to tuberculosis in the city, were *ex officio* members of the committee. The officers were to be a president, such vice-presidents as the executive committee might determine, and a secretary and treasurer elected annually. The executive committee was to consist of the officers, six ordinary members elected by the annual general meeting, the chest physician and a person nominated by him, the medical officer of health and a person nominated by him, and two health visitors specializing in tuberculosis

work in the city. Provision was made for the number of meetings to be held, the annual auditing of the accounts, and the confidential nature of the work was laid down.

The underlying aim was to combine the freedom of a voluntary body and the efficiency of the local authority. The executive was so designed that every member worked on either the appeals sub-committee or case sub-committee, and in some instances on both.

Accordingly, after this careful preparation, the inaugural meeting was convened in the Town House with the Lord Provost (a university professor and a very able speaker) presiding. Mrs. Wilson and Dr. Murray of the National Association for the Prevention of Tuberculosis were the two guest speakers.

Mrs. Wilson discussed the value of care committees in providing a focal point for all those interested in the care of the tuberculous; in facilitating treatment by helping to solve the social problems of the tuberculous household by relieving anxiety, helping to safeguard the patient from relapse, and preserving the health of the family exposed to risk. She emphasized the importance of complete consultation with the clinic team, and the confidential nature of the work; and she described some of the ways in which their own committee had given help.

Dr. Murray then spoke of the importance of the committee meeting frequently, the need to combat the tendency to be too careful with the funds at first and to try and keep the income of the tuberculous family at the level existing when the case was diagnosed, at least for the first year, and the error of continuing financial assistance to the lower income groups only. He then, as a representative of the NAPT, told the committee that the Association would be prepared to give an initial grant of £200 if they approved the constitution.

The election of officers then took place and as president the committee were fortunate in securing an ex-Lord Provost, representing the British Red Cross, who had long been a member of the NAPT and had a lively interest in this work. The senior chest physician and the medical officer of health were unanimously elected vice-presidents, a well-known local chartered accountant representing the Junior Chamber of Commerce became hon. treasurer, and the post of hon. secretary was taken by a health visitor tutor who had experience in tuberculosis nursing and visiting. The executive committee included representatives of the British Red Cross, Women's Voluntary Services, the Soroptimists, the health department and the university. Having been launched with the blessing of the NAPT and the city fathers, the executive committee met a week later.

Establishing the Work

At the first executive meeting the president gave the secretary a minute book and with some diffidence announced quietly that he had opened an account at a local bank with the treasurer and himself as guarantors. With this profession of faith in its ability to raise money, the committee thanked these two eminently practical and generous members and, much encouraged, proceeded with its plans.

It was felt that at the beginning it would be wiser to have all the professional social workers on the case sub-committee, and subsequently this proved a highly satisfactory arrangement. This case sub-committee was made up of the senior chest physician and his nominee, who was another consultant, the nominee of the medical officer of health who happened to be the senior lecturer in social medicine at the university, the senior National Assistance Board officer of the city, in an advisory capacity, the six health visitors specializing in tuberculosis, and the deputy medical officer of health who was appointed convenor.

The appeals sub-committee consisted of the rest of the executive, that is, the representatives of various voluntary organizations under the able chairmanship of the publicity manager for the city. The secretary and treasurer were common to both sub-committees.

Selection of Cases

The chest physician and the health visitors had no difficulty in finding cases, or perhaps it would be better to say in selecting cases. As the disease is notifiable, case finding for the purpose of a case committee is not difficult or haphazard and, with the exception of the odd vagrant and the common lodging-house case, most patients are very well recorded. The confidential nature of the case committee work presents no headache with purely professional workers. The group agreed that a monthly meeting was necessary to get things done with reasonable speed.

Having selected a case the appropriate health visitor wrote a comprehensive report setting out all the relevant details and the kind of help required. Also she produced a signed chit from the patient giving his consent to information about his medical condition and financial circumstances being submitted to the committee. The chest physician saw every case report before it was sent and a copy was duplicated for each committee member and sent to the secretary a week before the meeting. The National Assistance Board officer received his copy then in order that he might have time to look out his records, and in many cases increase the statutory help given to the family. Thus time in committee was saved and the maximum help obtained for each case.

For the payment of money in helping cases the secretary sent the treasurer a copy of the relevant minute, and all accounts were paid by the treasurer directly on receipt of this instruction. It was the policy of the committee never to give money directly to patients, but rather to pay bills direct to tradespeople or give it to the health visitor to administer.

Money-making then became the job of the appeals sub-committee. It was agreed to make a direct appeal to the people of Aberdeen from an official list of prominent citizens supplied from the city publicity department. This involved the designing of an appeals letter, personally signed by the president, and the folding and addressing of 540 letters and envelopes. This herculean task was undertaken by the member of the Women's Voluntary Services and her friends, the secretary and president. This appeal raised £166 and, it was felt, had been well worth the effort involved. Appeals were then made to other bodies like the University Charities Committee, the local football club, etc., with some success. Everyone on the committee brought their own wisdom, local knowledge and ideas to this problem of money raising, and this proved to be very enjoyable.

The University Charities granted £35, and by this time, the constitution having been approved, the £200 grant from the NAPT had arrived, a very welcome addition to our modest bank balance. In the autumn the tuberculosis health visitors formed a small sub-committee and organized a highly successful bring-and-buy sale with the enthusiastic help of the chief nursing officer and the general health visiting staff, and raised £122. By the end of the first year the committee had raised £323 8s. 9d., apart from the £200 grant from the National Association for the Prevention of Tuberculosis which made a total of £523 8d. 9d. In all £123 was expended on grants and £38 on stationery and there was a balance of £361 with

which to begin the new financial year. The incredulous expression on the bank manager's face was the best compliment offered when he reviewed the account at the end of the year.

The case committee dealt in all with 36 cases, and it was felt that the number of such cases had proved the need for the committee. Help was given in the following ways: several families had extra coal during the winter allowing more money to be spent on food; help was given for removal expenses and some new furnishings for families rehoused for tuberculosis, especially where they were not occupying all the rooms of the new house owing to lack of furniture, thus defeating the purpose of the rehousing; help was provided with fares for sanatorium visiting; some patients were referred to other charities to which they were entitled, such as service charities, the King Alfred Fund, the Cancer Relief Fund, etc.; holiday fares were paid for the whole family (not just the patient) in order that they could all go away, thus increasing the resistance to infection of the entire family; some help with hire purchase commitments was given when this resulted in too little money being available for food; money was loaned for the payment of rates, to be repaid when the patient returned to work (on the suggestion of a patient); extra blankets were provided for a family in the very cold weather where the bed covering was inadequate; wirelesses were supplied for elderly patients living alone; advice and help was given about re-training for work in conjunction with the Disablement Resettlement Officer and at Christmas 60 families who had been living on National Assistance grants for a year or more were given food parcels.

Here then were 96 families who without this committee could not have had the various kinds of help outlined. The committee at the end of the first year felt a certain sense of achievement, especially on reading the occasional letters of thanks from people who had been helped, and with the preliminary hurdles behind it could look forward to a more ambitious year with increased confidence.

Since tuberculosis care committees are badly needed and are relatively rare, and since the Aberdeen committee is perhaps unique in combining the freedom of a voluntary body with the efficiency of an organization largely administered by local authority officers, the writer felt that a brief description of its origin and initial work might be of interest.

HEALTH VISITING AND CASE-WORK

by EVELYN H. DAVISON, B.A.,
Lecturer in Social Studies, Southampton University.

ONE result of the National Health Service Act has been to extend very considerably the range of work of the average health visitor. Because of this, the relationship between health visiting and case-work has been much discussed. At the one extreme, there is the medical officer of health who says that the health visitor can do all the welfare work that is needed, and who regards case-workers as entirely superfluous. On the other hand, there is the case-worker who guards what she regards as her territory so jealously as to appear unappreciative of the health visitor's particular contribution to the welfare of her clients, and of the possibilities of fruitful co-operation.

The purpose of this article is to consider what health visitors and case-workers have in common, where their particular disciplines differ in purpose and in method, and to explore certain avenues which might lead to more fruitful co-operation.

Some confusion is undoubtedly caused by the fact that we can never be quite sure that any two people mean the same thing when they speak of case-work. Some use the term to mean almost any kind of welfare work with an individual or a family, others to differentiate a special kind of professional service. Some frankly do not know what the term means, as witnessed by an advertisement for a case-worker which appeared in a newspaper among the craftsmen and makers of leather goods! In this article the term is used to mean a special kind of service, of which I would offer the following definition.

> Case-work is a professional service offered to those who desire help with their personal and family problems. Its aim is to relieve stress and to help the client to achieve a better personal and social adjustment. It proceeds by the study of the individual in his social environment, by the establishment of a co-operative relationship with him, and by the mobilizing of both his own resources and those of the community, to work towards these goals.

For purposes of comparison, I have framed a definition of health visiting in a similar form.

> Health visiting is a professional service offered to families in which there are young children, and also to certain elderly, infirm, sick or handicapped persons. Its aim is preventive health education and social advice. The health visitor proceeds by visiting those assigned to her, by listening to and considering the nature of the problems laid before her, by offering information and advice on all matters pertaining to health, in its broadest sense, and by close co-operation with medical and social services, to promote the health and welfare of those committed to her care.

Both definitions are divided into two parts, the first stating the aim of the service, and the second indicating the means by which it is to be achieved. Let us consider first the respective aims of health visiting and of case-work.

The recent report of the working party inquiring into health visiting* states that: "The functions of health visitors should primarily be health education and social advice."[1] Later, it defines social advice as including "any social action taken to enable the client to follow the health advice given—usually direct practical advice on family management but often advice to turn to others when more help is needed."[293] That there is a social side of a health visitor's work, no one would deny, any more than one would doubt the importance of a doctor's recognition of the social and psychological as well as the physical aspects of his patient's illness, or a case-worker's awareness of the effect of long-term illness on her client.

In any field of work it is one of the marks of professional competence to know one's boundaries and to be sensitively aware of the point at which one's client would be better served by another. This is by no means easy

** Throughout this article numerical references refer to paragraphs in this report. Other references are designated by a letter.*

because, in work with people, boundaries cannot be sharply defined in the way that a trade union may define what certain craftsmen may and may not do. A health visitor may not always find it a simple matter to decide when a mother should be referred for medical advice; a case-worker, seeking to help a client with a deep-seated personality disorder, may, if she is not careful, go too far into the realms of psychotherapy, and a doctor may spend a lot of time seeking to obtain some practical help for a patient which might have been more easily and quickly supplied by reference to the appropriate agency. Sometimes it is our very zeal which impedes effective co-operation. We want to help our clients; we have built up a good relationship, and our professional pride is touched if they show an initial reluctance to the idea of referral, so we find it hard to continue our interpretation of the reason behind the suggestion.

Two Types of Service

May we return to our two definitions for an answer to the question of who are the people served by health visitors and by case-workers? The health visitor's clientele consists of a certain group in the community deemed by the health authorities to require preventive health education. In the majority of cases the help she has to give is offered by her, not requested by her clients. Some problems she will, of course, encounter, but the great majority of her clients are perfectly capable of managing their own affairs and are able to maintain a normal independence. The case-worker, on the other hand, comes in at a point of breakdown, when the client is aware either directly or through some agent, such as the court, of a problem with which he is unable to grapple alone. He comes to the case-worker of his own volition, or is referred to her.

The "problem solving process", as case-work is sometimes described in the United States, takes considerable time, and could not adequately be undertaken by anyone with as heavy a case-load as the average health visitor. This is recognized in the Report, and the further point is made that people may prefer to take their more personal problems to "some other person than the familiar figure of the health visitor".[336] The fact that contact may be terminated when the problem is resolved may be of some importance.

Before discussing the respective methods of work of the health visitor and the case-worker I would draw attention to certain fundamental principles and attitudes which must underlie all true case-work but which are not peculiar to the case-worker. They may be shared by doctor, minister of religion, health visitor and educationist. I believe, moreover, that the extent to which they are shared is an important measure of the possibility of effective co-operation. First among these principles I would place respect for the dignity of the individual, the belief that people matter for themselves and that, within the limits imposed by the community for the benefit of all its members, they have the right to the maximum possible opportunity to lead full and satisfying lives, in the manner which they themselves choose. Respect for the individual implies respect for his right of self-responsibility. It is easy to pay lip service to this right, yet I question whether there is anyone engaged in one of the personal services who can claim never to have infringed it. That quite excellent plan made without discussing it with the person concerned, that consultation without his knowledge and consent, to give but two examples. I venture to think that when we dub a person 'unco-operative' more often than not the reason may be our own failure to treat him as a responsible person.

In modern case-work literature there is much discussion of the principle of acceptance. One of the best expositions I know is contained in an article by Florence Hollis in the journal *Social Work*.[a] Acceptance is not another name for *laissez-faire*, nor does it imply abandonment by the worker of her standard of values. Rather it is the attitude shown when the worker has learnt to separate judgements from feelings towards a person. It is an attitude which conveys to the client the worker's goodwill and desire to help and, what is perhaps more important, the worker's belief in him and his capacity for responsible and effective action. Criticism without acceptance usually produces resentment which makes it a doubtful agent of constructive change, but a critical appraisal, in which the client can share and which he does not feel is a criticism of him as a person, may evoke considerable response and change. I think of a woman who had been severely criticized, and not without reason, by her rent collector and other officials until a great wall of resentment had been built up against THEM, but when approached with appreciation of her genuine, if sometimes misguided, concern for her invalid child, and with some understanding of her difficulties, her resentment melted away and constructive work with her became possible.

The principle of confidence is another foundation stone of all personal work and, like those outlined above, is basic to effective co-operation in social work.

Let us again return to our two definitions and compare ways in which health visitor and case-worker approach their respective tasks. Each uses the interview as her main means of approach and each needs to be sensitive to the emotional response of the client. But while, for the health visitor, the majority of her interviews will be concerned with the giving of expert information which is desired by her clients and which for the most part they are able to accept without conflicting emotion, for the case-worker the majority will be with people who are emotionally disturbed and who can only begin to use help when their anxieties have been relieved by talking out their problem within the security of a professional relationship (see para. 72 of the Report). A case-worker requires an even more highly developed interviewing skill than does the health visitor. The interview is her primary means of gaining understanding and it is also an important element in case-work treatment.

Both health visitors and case-workers establish relationships with their clients which may do much to make or mar their work. There is, however, a subtle difference between relationship as the term is used in common speech to mean good *rapport* and the case-work relationship which, in skilled hands, may be consciously used as one of the means of helping a client.[b]

Skill in Diagnosis

Skill in diagnosis is fundamental to good case-work. This skill may be described as the worker's sensitive understanding of her client as an individual, and her appraisal of the effect of personal relationship and of events past and present on that individual. The case-worker asks not merely what are the facts relating to this problem, but what does this problem mean to this individual? It is the more subtle understanding of her client's attitude and feelings which give the clue as to how help may best be given.

In this process of understanding there is scope for

a *'Social Work' Vol. 12. No. 2. April 1955.*

b *For fuller development of this subject see 'Relationship in Case-work' by E. M. Goldberg ('British Journal of Psychiatric Social Work' Vol. 8. Nov. 1953), also my article 'Therapy in Case-work' in 'Social Work', Vol. 12. No. 3. July 1955.*

really fruitful co-operation between case-worker and health visitor. As already mentioned, the case-worker is usually called in at a moment of crisis, at a time when her client is temporarily overwhelmed by some problem which has got out of hand, when behaviour is exaggerated or maybe quite out of keeping with the client's normal self. It is most important that the case-worker should have some idea of her client's capacity and behaviour under normal circumstances. This knowledge the health visitor may well be able to supply, for in the main her contact is with families in normal circumstances.

The importance of this contribution is stressed in an excellent article in the *Nursing Times* of February 24, 1956.[c] In this article Mrs. Castle makes a plea for fuller records by health visitors. Her plea must be considered realistically in the light of present case-loads and time available. A record is never an end in itself, rather its justification lies in the extent to which it makes possible better service to the client. A good record can be a real aid to understanding, to continuity and to closer and more effective co-operation. The case-worker will probably always need to record more fully than the health visitor but both would do well to consider what style of recording best serves the purposes of their particular service.

In addition to the working party on health visiting, the Ministry of Health set up another to consider recruitment, training and deployment of social workers in health and welfare departments of local authorities. Its report is awaited with interest, but meanwhile social workers in the field have a real opportunity to make our welfare state an effective servant of its citizens, by considering together how their most fruitful co-operation may be achieved.

c *'Social Case-work and the Need for Records', Margaret Castle. 'Nursing Times', February 24, 1956.*

New Research in Mental Health

THREE important mental health research projects are to be undertaken under the auspices of the Mental Health Research Fund. Dr. James A. Hislop, of the department of Human Ecology and University Health Service, Cambridge, will investigate the question of whether mental illness is actually on the increase, or whether more efficient diagnosis and better treatment facilities account for larger numbers of cases. His inquiry will be conducted at Fulbourn Hospital, Isle of Ely—a hospital serving a static population where statistics over the past hundred years are available. Dr. Max Hamilton, D.P.M., senior lecturer, Department of Psychiatry, University of Leeds, receives a senior research fellowship of £1,000 for two years in order to study and compare the effects of E.C.T. and insulin shock treatments in paranoid patients. At present results appear to be erratic, and it is intended to investigate constitutional and other factors in patients which may provide some guide to which is the preferable treatment in individual cases. A travelling fellowship has been awarded to Dr. R. P. Hullin, PH.D., M.SC., lecturer in the Department of Biochemistry, University of Leeds, who will spend a year in the Department of Physiological Chemistry, University of Pennsylvania, U.S.A. He will study new biochemical methods which may be applied to the study of the blood in manic-depressive psychoses and endogenous depression; chemical variations in the blood may be related to mood phases in these patients and investigation may provide a clue to the best time for administration of electro-convulsive therapy.

THE COLLEGE COUNCIL MEETS

October 1956

OPENING the meeting of the Council of the Royal College of Nursing on October 18, Mrs. A. A. Woodman, chairman, welcomed Miss J. Ritchie from Scotland on her first attendance as a Council member. In reply to the request made by the Council, the Minister of Health had agreed that discussion should take place between officials of the Ministry and representatives of the College on points raised in the memorandum prepared by the Public Health Section on the report of the Government working party on District Nurse Training. The College representatives nominated were Mrs. Woodman, Miss Opie, Miss Newington and Miss Wearn, with a representative from Scotland.

U.K. Committee for UNICEF

Following the Council's consideration at the previous meeting and subsequent inquiries into the proposed United Kingdom Committee for the United Nations International Children's Fund, the College has accepted membership of this committee, whose aims are to further the support in this country for UNICEF and to make its work more widely known. Miss M. K. Knight, secretary, Public Health Section, was nominated to serve as the College representative on this body. The chairman is Viscountess Kilmuir, hon. secretary Mr. David Ennals, secretary, United Nations Association, the hon. treasurer Sir Cuthbert Ackroyd, Lord Mayor of London.

Miss M. B. Powell reported that the Professional Association Committee had studied the relevant sections of the second report of the Forces Medical and Dental Services Committee. The comments prepared by the Professional Association Committee drew attention to a number of matters which the Council discussed fully. They deprecated the fact that no nurse had been appointed to the committee which had dealt among other matters with 'nursing and ancillary services'. The whole question of the introduction of 'other ranks' into the nursing services of the Crown and the practice of employing on ward duties women from non-nursing sections who had not volunteered for such duties was considered.

Opportunities for Services nurses to attend refresher courses and post-certificate educational courses such as the two-year sister tutor course were also discussed. Many other details in relation to training for nurses and assistant nurses within the Services and the position of trained nurses, both men and women, were considered. The Council agreed to approach the Forces Medical and Dental Services Committee on matters related to nursing in the report.

Nurses' Superannuation

The Council were gratified to learn that the Ministry of Health had assured them that the superannuation

position of nurses called up in the reserves of the nursing services of the Crown Forces was protected. Such service came within the meaning of National Service and, provided the officer continued to pay the employee's contributions, it would be recognized as service under the National Health Service (Superannuation) Regulations 1955.

A reply had been received from the Minister of Health to the points raised by the College in connection with the superannuation position of certain nurses who resume part-time employment and ultimately full-time employment after having suffered accident or disease in the course of their employment in the National Health Service. In this matter valuable help had been given by Dame Irene Ward, D.B.E., M.P., who had introduced a deputation of representatives of the Royal College of Nursing and other interested organizations which was received by the Minister. The Council noted with appreciation that the Minister was prepared to extend the period within which there is no disqualifying break so that superannuation could be maintained in the case of employees who return to full-time employment, and that provision for this would be included when the proposals for amending the existing National Health Service Superannuation Regulations are put before Parliament. It was regretted, however, that the Minister could not agree to extend the benefits of the scheme to employees resuming part-time work with no prospect of returning to full-time employment, though he had pointed out that such a nurse would be eligible to receive an injury allowance in addition to part-time pay and also to receive an incapacity award, pension being abated as necessary should part-time work be taken up.

A number of matters had been considered by the Labour Relations Committee, including the anomaly in the annual leave recommendation of the Rushcliffe Committee by which a nurse leaving her employment was entitled to only one-twelfth of the total leave allowance for each completed month of service in the leave year, so that the nurse leaving after 11 months' service was entitled to less total leave than the nurse not leaving the service (who only worked 11 months with one month's holiday).

A letter from the Sister Tutor Section asking for a review of the salaries of all tutors had been considered by the Labour Relations Committee. They also asked that the salary of a principal tutor should be at least that of a deputy matron and that provision should be made for a further grade of tutor. The Council agreed to consider these proposals.

Definition of Nurse

The Council discussed the definition of the term 'nurse' under the Nurses' Act 1949—which states that the term 'nurse' means 'a nurse for the sick and nursing shall be construed accordingly', and it was agreed to prepare a definition more in line with the modern practice of nursing, for example one similar to that suggested in the World Health Organization Report of a Working Conference on Nursing Education—"that a nurse, who is needed in all parts of the world, is one who is prepared, through general and professional education, to share as a member of the health team in the care of the sick, the prevention of disease and the promotion of health."

Miss Houghton reported that the Education Committee had no comments to add to the memorandum submitted by the Sister Tutor and the Ward and Departmental Sisters Sections on the draft syllabus of the General Nursing Council for England and Wales for the training of mental nurses which had been considered by the Council at the previous meeting.

The following examination results were reported.

Sister Tutor Diploma, University of London. Part 2 1954-1956 Course: 23 students entered; 19 passed; 5 gained special credit in Practice of Education (Practical) 2 in Educational Psychology; 2 in Physiology with Nutrition and Anatomy; and one in Public Health and Preventive Medicine. The Cowdray Scholar of 1954-56 gained 2 credits. Part 1, 1955-1957 Course: 30 students entered; 23 passed. One of the two Cowdray Scholars of 1955-57 obtained credits in both subjects.

Health Visitor Course, Royal Society of Health examination: 25 students entered, 23 gained the certificate.

The numbers of students in the respective courses for the 1956-1957 session were: full-time—ward sisters 21, nursing administration (hospital) 32, nursing administration (public health) 6, health visitor tutors 9, district nurse tutor 1, sister tutors (first year) 34, sister tutors (second year) 25, occupational health nursing 17, 20, and special courses 5; part-time—Diploma in nursing 12, 15, introductory course for overseas students 41.

Birmingham Centre of Nursing Education—registrations for the school matrons' courses were 17, for the course on tuberculosis 11 (full-time), and 23 students attended the residential refresher course for nurse administrators in hospital, public health and occupational health.

Sister Tutor Section

Miss M. Hill, chairman of the Sister Tutor Section, presented the report and announced that the Agnes Elizabeth Pavey shield for the practical part of the contest for nurses in mental hospitals and mental deficiency institutions entering the annual contest for the Marion Agnes Gullan Trophy had been received by the Section (see *Nursing Times*, August 3 and 10). With the Ward and Departmental Sisters Section the Section had prepared a joint memorandum on the nursing assistant working in mental and mental deficiency hospitals, which was presented to the Council by Miss P. R. M. Rowe, sister-in-charge, St. Luke's-Woodside Hospital, and Miss A. Altschul, principal tutor, The Bethlem Royal and the Maudsley Hospitals. An interesting discussion followed, particularly on the present position and the possible effects arising out of the Ministry circular HM(55)49, on the in-service instruction of nursing assistants; also on the future possibilities for and the preparation and recognition of a grade of assistant mental nurse, comparable to the assistant nurse in the general nursing field.

Miss C. E. Anderson presenting the report of the Scottish Board said that the vice-chairman, Miss J. A.

FIFTY YEARS AGO

From the 'Nursing Times' October 1906 The scope of work for lady sanitary inspectors is, we learn, shortly to be extended, owing to the exceedingly favourable and complimentary report of their work issued by the L.C.C. in its public health report. A class of inspectors will probably be constituted who will be charged with such duties as giving advice on the prevention of infant mortality, limiting the spread of disease, inculcating habits of domestic and personal cleanliness, and the best methods of utilising food.

* * *

October 1906 The Countess of Warwick, in addressing the 11th annual meeting of the Dunmow Nursing Institution, referred to the terrible ignorance which existed in the country district where as yet there were no nurses. She concluded by saying that the introduction of trained nurses into that district had been the means of saving many lives, and she hoped the time was not far off when every village would have its own capable nurse.

The PRINCESS ROYAL with members of the Northern Ireland Appeal Council, after its final meeting on September 28.

Armstrong, had welcomed with much pleasure the president, Miss G. M. Godden, who attended a meeting of the Scottish Board on the occasion of her visit to Scotland for the Glasgow Branch annual dinner.

Miss M. C. N. Lamb, education officer, Scottish Board, had been appointed part-time lecturer to the University Nursing Teaching Unit as from October 1, 1956.

Requests had been received for nominations to the Scottish Health Services Council and the Standing Nursing and Midwifery Advisory Committee; names were being submitted to the Department of Health. A working party had been set up to prepare material for submission to the Scottish Maternity Services Review Committee; the members were Miss G. C. Cruickshank, midwifery superintendent, Western General Hospital, Edinburgh; Miss M. J. Ferrier, health visitor to the University General Practice Teaching Unit, Edinburgh; Miss J. R. Hurry, county nursing superintendent, Kirkcaldy; Miss M. C. Ormiston, nursing superintendent, City of Glasgow; Miss J. Ritchie, matron, Stirling Royal Infirmary, and Miss E. W. Stenhouse, domiciliary midwife, Glasgow.

It was noted with regret that the resolution proposed by the St. Andrews Branch of the College for discussion at the annual conference of the National Council of Women of Great Britain in October had not been selected for the agenda. The Council agreed that the resolution " that old people whose sole source of income is old-age pension be granted milk and vitamin preparations at the same reduced rates as expectant mothers and children " was valuable and agreed to continue their efforts to bring this to the notice of the appropriate authorities.

The Student Nurses' Association annual rally and speechmaking contest had been held at the Royal Edinburgh Hospital by courtesy of the matron and board of management who were more than generous in their hospitality to the 90 students and guests who attended. Miss L. M. Avery, secretary-general, Royal Australian Nursing Federation, presented the Greig Cup and prizes; Miss Annie Butchart, King's Cross Hospital, Dundee, was the winner, Miss Margaret Butler, Stracathro Hospital, Brechin, was the runner-up. The subject for the speeches was ' Education for Life through Nursing '.

A successful area meeting was held by the Sister Tutor Section, Scottish Regional Committee, at Perth in September. The subject was ' Difficulties met with when teaching from the New Syllabus ' At this meeting Miss A. Aiken, Stracathro Hospital, was appointed chairman to succeed Miss I. G. McInroy who had been chairman of the Section in Scotland for 20 years. A writing bureau and handsomely decorated mirror was presented to Miss McInroy in appreciation of her outstanding service to the Sister Tutor Section in general, and to the Scottish Regional Committee in particular.

The area organizer reported details of Miss B. Yule's visits to the Ward and Departmental Sisters Section within the Branches, which were much appreciated. A new Section within the Perthshire Branch had been established.

Northern Ireland

Miss M. H. Hudson, chairman of the Committee for Northern Ireland, reported that the Princess Royal visited the Committee's headquarters on September 28, on the occasion of the final meeting of the Appeal Council. The Princess Royal accompanied by H. E. Lady Wakehurst was welcomed officially by the Lord Glentoran, H.M.L., the Lord Mayor and the Town Clerk of Belfast, the Rt. Hon. Dame Dehra Parker, D.B.E., M.P., Minister of Health and Local Government, and the chairman of the Appeal Council, Mrs. J. A. Mackie, O.B.E. In reply to Mrs. Mackie's speech of welcome, the Princess Royal commended the work of the Appeal Council and wished the College future success and happiness. Nurses from all parts of the province attended the function.

The Council agreed to hold a three-day conference on the memorandum *Observations and Objectives* on December 3, 4 and 5. The date of the next meeting is November 15.

Convalescent Homes— A Working Party for London

THE Minister of Health, Mr. R. H. Turton, has appointed a working party to consider the arrangements for convalescent treatment under the National Health Service with particular reference to those existing in the London area. The terms of reference are: " To examine the extent to which the provision of convalescent homes in the National Health Service is meeting the demands placed upon it in the light of recent advances in medicine and modern conceptions of treatment and nursing care, to review the admissions machinery in the London area and to make recommendations."

The working party consists of officers of the Ministry and the following members representing outside organizations: Captain H. Brierley, O.B.E., M.C., secretary and house governor, London Hospital, E.1 (The Teaching Hospitals Association); Sir Henry Tidy, K.B.E., M.D., F.R.C.P., and Commander R. W. Peers, R.N. (Retd.) (King Edward's Hospital Fund for London); Miss A. B. Reed, head almoner, St. Thomas' Hospital, and Miss M. J. Roxburgh, head almoner, The Middlesex Hospital (The Institute of Almoners); James Graham, Esq., M.A., M.B., CH.B., senior administrative medical officer, North East Metropolitan Regional Hospital Board, and B. J. Lord, Esq., deputy secretary, North West Metropolitan Regional Hospital Board (Metropolitan Regional Hospital Boards); R. A. Andrews, Esq., M.A., M.B., B.CHIR., D.M.R. (general medical practitioner).

The chairman of the working party will be Dr. N. M. Goodman, a principal medical officer of the Ministry, and the secretary Mr. L. B. Jacques, also of the Ministry.

Letters to the Editor

Health and Wholeness

MADAM.—In Manchester, on September 29, I joined with health visitors in a conference to discuss the Working Party Report. Much discussion centred round the case-worker. One speaker made a remark so challenging that it was received in silence and quickly passed over. She referred to the interpretation of health as the well-being of the body, mind, and spirit, and made a plea that we should not ignore the spiritual aspect.

For a long time, I have concerned myself not so much with the many problems requiring social action as with the cause and prevention of such problems.

We are health visitors and it is significant that the Anglo-Saxon root of the word 'health' means' holiness' as well as 'wholeness'. During their long histories, the medical and nursing professions have learnt that much bodily illness has its origin in the mind. Today, bodies are more whole than ever before, but minds are sick. Our mental hospitals are overflowing, and we are becoming more and more aware that for many, life has become tasteless and purposeless, a striving to get, but with nothing to give.

Against these full hospitals we might well set our empty churches. We all know of families in which, despite social action, stability is not present, and we are left thinking "if only they were different".

For when all is said and done, what is case-work? Having co-ordinated the social history, environmental influences, character traits and the like, where are we? Can we docket our families, take relevant social action, without realizing that unless the spirit governing those people is changed, there will be further need of social action sooner or later? Should we not go deeper? Frequently we hear "you can't change human nature". Yet lives are changed. Christ can and does change and direct human purpose.

I have spoken to many interested and disinterested persons on this topic, and the usual response is that it is 'the churches' business', meaning I assume, that it is the work of the ordained minister. They certainly are specialists, but surely the onus is on us, the laity, for I read in my Bible that the Church is the mystical body of Christ, made up of believers filled with the Holy Spirit. Christ's miracles of healing and social action were all bound up with the individual's spiritual need. Surely this points to the fact that health, social advice and action are purposeless and meaningless without reference to spiritual well-being.

In our pioneer days health visitors were called health missionaries, and they indeed spread their gospel of health insofar as it was then understood, but now we are given a deeper and wider concept.

Here is the answer to our problems, to our case-work—lives changed by belief in Jesus Christ and the gifts of the Holy Spirit. Yet "how shall they learn without a teacher?"

The challenge comes to us anew down the ages, to all who concern themselves with their fellow men. "Behold, I send you forth . . . Heal the sick and say, the Kingdom of God is come nigh unto you."

At this time when we are considering the training and field of work of health visitors, should we not take stock of what we want this to be? How far are we concerned with health, that is, the wholeness of man—with only two-thirds? This is the greatest challenge that has ever been given. Dare we take it up? There are many among us who have, but it must have more recognition by our leaders, in our training schools and in our departments, and in ourselves.

B. M. LONG,
College Member 73577.

Recruitment—Influence of Surroundings

MADAM.—I was interested to read of the developments at Cuckfield Hospital, and congratulate all concerned at the wonderful progress made in so short a time. My home is only about six miles from the hospital, so I have some appreciation of the great changes made.

My real reason for writing to you is to make a mild protest regarding your comments on recruitment there. To say that they have no recruitment problems because "hospitals are advertised from within" is a somewhat unreasonable statement, overlooking the fact that Cuckfield is in one of the loveliest parts of Sussex, free from polluted air, in a very pleasant residential and agricultural area, and no industry nearer than Crawley New Town, 12 miles away. It is also within easy distance of London or the coast.

My hospital has a happy atmosphere, also with a 'freedom' policy, but we are terribly overworked due to staff shortages. But then *we* are in a grim dirty area, with industry surrounding us and slums on our doorstep! Student nurses, reading a paragraph like that, may realize that the deciding factor of recruitment *is* external conditions for the hospitals in the South.

NORTHERN MATRON,
College Member 34712.

Field of Remembrance

The Q.A.R.A.N.C. Association, 20, John Islip Street, Millbank, London, S.W.1, wishes to draw the attention of members to the Field of Remembrance at Westminster Abbey on November 8 at 12 noon. Would Association members able to join representatives at the opening ceremony please send names to the secretary.

Royal East Suffolk Hospital, Hastings

Miss M. H. Pierce, who has been at the hospital since 1930, is retiring in November. Past members of the staff will remember her best on P.W.1. It is hoped to make a presentation to Miss Pierce, and anyone wishing to subscribe should send their donations to matron, please.

STATE EXAMINATION QUESTIONS

GENERAL NURSING COUNCIL FOR ENGLAND AND WALES

Preliminary State Examination—Part I

Candidates must attempt two questions from Section A and two from Section B, and one from either section.

SECTION A.—ELEMENTARY ANATOMY AND PHYSIOLOGY

1. Give an account of the shoulder girdle and describe its functions.

2. Enumerate the structures involved in respiration. Describe the sequence of events leading to the intake of air into the lungs and to its expulsion.

3. Describe the structure of the kidney. Indicate briefly how urine is produced.

4. Give an account of the return of blood to the heart from (*a*) the foot and (*b*) the small intestine.

SECTION B.—PERSONAL AND COMMUNAL HEALTH

5. Give a brief account of (*a*) carriers of disease; (*b*) the importance of antenatal care; (*c*) the value of health inspections in schools.

6. Describe satisfactory methods of dealing with refuse (*a*) by the householder and (*b*) by the local authority in a large town. Why are these measures important?

7. There is a proposal to instal electricity and a piped water supply to a row of country cottages. Discuss the benefits these amenities would bring to the householders.

8. What are the aims in ventilating a room? What is meant by: (*a*) natural ventilation; (*b*) artificial (mechanical) ventilation? State in what conditions the latter may be needed.

Part II

PRINCIPLES AND PRACTICE OF NURSING (including BACTERIOLOGY AND PRINCIPLES OF ASEPSIS AND FIRST AID)

1. What are the important points to be observed in the preparation of a patient for a general anaesthetic?

2. For what purposes may inhalations be ordered? Describe the preparation of one of the types you mention. How is the patient safeguarded?

3. Describe the nursing care you would give to a bed-ridden patient who is paralysed on one side of his body.

4. A patient suffering from an infectious disease has been nursed in a side room. Describe in detail the measures which should be taken to deal with the room after the discharge of the patient from hospital.

5. What first-aid measures would you carry out in the following circumstances: (*a*) a woman found unconscious in a gas-filled room; (*b*) a child who has swallowed disinfectant fluid?

6. What rules should be followed in the administration of a medicine by mouth? What precautions should be observed in a hospital ward regarding the storage of medicines?

7. What is the value of a feeling of security in the upbringing of a child? How may this affect his career as an adult?

The Board of Examiners by whom these papers were set is constituted as follows: G. A. KILOH, ESQ., M.D., M.R.C.P., MISS E. W. M. CLARE, S.R.N., MISS K. A. B. FOWLER, S.R.N., R.S.C.N., MISS G. M. OLIVER, S.R.N., R.M.N.

RUSH GREEN HOSPITAL OPEN DAY

An open day for the general public will be held at Rush Green Hospital, Romford, on Wednesday, October 31 at 2.30 p.m.

The objects of this open day are to give the public an insight into the organization of the various departments of a busy general hospital; to quicken the interest of young people in nursing as a career, and to stimulate recruitment to the National Hospital Service Reserve.

PULMONARY TUBERCULOSIS

Changing Emphasis in Treatment

by ERIC K. INNIS, S.R.N., B.T.A.CERT.,
Night Staff Nurse, St. Mary's Hospital, Milton, Portsmouth.

REVOLUTIONARY changes in the treatment of pulmonary tuberculosis are of more recent origin, but there has been a slow and long development in conquering the disease. This can be seen from the following statistics:

Deaths from Tuberculosis in England and Wales

1869	70,404
1945	23,468
1949	19,802
1954	7,899

This recent dramatic decline in the death-rate, due to a number of factors, has made it possible to concentrate on finding new cases with the help of mass X-ray units. Even here the number of new notifications and the percentage of sputum-positive patients shows a fall:

Notifications in England and Wales

		(sputum-positive)
1949	47,191	40%
1954	39,522	37%

More attention can now be paid to the problem of prevention, but it calls for imagination and alertness if we want to come near Denmark's position, where no one under the age of 25 has recently died of tuberculosis. For nurses, however, the figures only provide the background. We have to look for reflected changes in the treatment of patients now coming under treatment at an earlier stage.

Bed-rest

Reading Thomas Mann's *Magic Mountain* again, I was astonished to find that much of the treatment of pulmonary tuberculosis before the First World War is still in use today. In those days Switzerland was the leading country where the consumptive sought relief and where the climatic conditions attracted patients and physicians alike. These are the characters portrayed in Thomas Mann's book. The basic principle of treatment was a simple one, which is still applied to all febrile conditions—complete bed-rest. Rest treatment created a world of its own; but the disease was only prevented from spreading by resting the body and thereby resting the lungs.

Mr. Snell, M.D., F.R.C.P., in his presidential address to the British Tuberculosis Association Conference in 1955 reminded us of the old times, when treatment was "based entirely on Marcus Patterson's scheme of graduated exercise in which patients as soon as they become afebrile on bed-rest, and this was the only criterion, were soon got up for increasing hours, thence to curtailed walks and so to various grades of garden work. Grade 1 in summer consisted merely of carrying baskets of grass-mowings, while grade 5 involved heavy work with spade and wheelbarrow or axe. The idea behind this was that each graded weekly increase stirred up the pulmonary circulation, liberating increasing doses of tuberculin, which stimulated the patient's resistance by auto-inoculation. An evanescent rise of temperature to 99.2°F or so as the grade increased was a desirable indication that this had occurred, although I do not think that it was often seen."

The task of supervising the patients at these exercises was often given to the hospital gardener. Today we smile at this, but our present-day treatment swings back to the ideas behind those of Patterson, and quite recently Dr. G. A. Day has expressed this simply: "Basically, I submit, the problem of tuberculosis has always been the problem of resistance . . . and still is."

He goes on to say: "In spite of every modern advance, there appears to be only one way in which to develop resistance: prolonged rest followed by slowly increasing and carefully graduated exertions."

Collapse Therapy

The big advance in the treatment with other means started with collapse therapy. Artificial pneumothorax and resection of adhesions was hailed in the 1920's. Streptomycin opened the way to major surgery like thoracoplasty, lobectomy and segmental resection and in some cases pneumonectomy. All these help to eliminate tuberculosis in the mainly affected parts, but as it is very seldom confined to one part of the lung it is still necessary to develop several resistances within the patients. Streptomycin, PAS and INAH are of considerable help but rest and gradual exercise are still predominant factors and together they show results.

Dr. Holmes Sellors was greatly astonished when he discovered that after two years a number of patients on his waiting list for surgery did not need operations any more. After a swing towards major surgery we now notice a swing towards more selective surgery, a sign that the more advanced cases have benefited by major surgical treatment of past years. For a long time effective treatment depended on the place in a long waiting list for surgery, but now it is the chest physician who dominates the field, leaving the chest surgeon more time to deal with carcinoma of the lung.

F. H. Young illustrates this change in his survey of some surgical cases. "The part of the surgeon is that of the character who comes into the play fairly late, monopolizes the most dramatic scene and then takes little further active part in the play; whereas the physician is on the stage from the rise till the fall of the curtain." (*British Medical Journal* and Brompton Reports.)

Surgery Not Enough

Tuberculosis patients who have had major chest surgery often do not understand that this is not *all* the treatment. "Experience so far gained", says L. E. Houghton, "suggests that surgery, or indeed any form of collapse therapy, cannot as a single measure reverse an inherent tendency to react unfavourably to the tuberculous bacillus or reinforce resistance in a vulnerable individual when he is placed in an unfavourable environment." Rest treatment and gradual increase in exertion is all-important and calls for more than nursing skill, because the patient has to contend with a long-drawn-out treatment, which often seems endless from his point of view. Calming the often very strong temperaments and in some cases the planning of an entirely new life are difficult and involved tasks.

G. A. Day draws attention to "another change which has taken place over the years and that is the greater co-operation of patients and their ability, presumably due to the rising standard of education, to appreciate the ideas behind their treatment." With this in mind, home treatment even of sputum-positive patients became possible without danger to the community, but a recent survey in Glasgow shows that sputum-conversion is less effective at home.

Perhaps the best lead in the conception of a comprehensive treatment of pulmonary tuberculosis has come from Canada, where I understand that right from the beginning the question of a suitable occupation after successful treatment is taken into consideration. This is discussed with the patient and as far as possible preparations for the new job are started while the patients are under treatment. Thus the ever-present anxiety about the future has lost much of its sting and the patient's mind is set at rest.

For those interested in more detailed information, especially about treatment in Switzerland and Scandinavia, Miss Mary Mostoyn has given an excellent report in *NAPT*, April 1956. Her report closes with a hopeful note about BCG and prevention of tuberculosis. Speaking of Denmark she says: "One can see the positive results of the BCG campaign in the children's hospitals' empty beds and rarely any miliary disease. Though children who have had BCG have later developed primary disease or the adult type, none developed miliary tuberculosis or tuberculous meningitis.

No doubt many points could be added, especially about the difference in treatment in countries like the United States and in the Far East. I have tried to bring out some recent thoughts about the problem in Great Britain and quotations were chosen accordingly. In conclusion I would like to repeat the often quoted words of Dr. Morriston Davies, who said: "Those patients whom I can get to heal themselves without my having to do anything, I regard as my greatest triumphs."

Colour in a Children's Ward

A MINOR REVOLUTION

WE have just returned to our newly decorated ward.

I must admit we were all a little downhearted when we were first told we must move out of our familiar surroundings to a ward on the first floor, and we tended to think what a lot of trouble repairing and decorating would cause us. Eventually we completed the migration, but from the very beginning had made up our minds that we were not going to like it and never became reconciled.

Then came the problem of choosing colours for our own ward. Little we thought at this stage of the many comments the colour scheme would bring forth, some pleasant, many not so pleasant. After much time spent in looking at colours and in prolonged discussion, we decided to have a rose pink ceiling, dove grey walls, and a deep French pink in the alcoves, and round the windows, to accentuate the two pastel shades. As the ceiling and walls were gradually transformed into delicate shades

of pink and grey our choice of colours met with approval, but when the French pink was added we suffered from many condemnatory and often scathing remarks from the various critics—one person said it looked like Brighton rock, another that it looked like blancmange, and the male medical staff disliked it intensely and made no secret of it. This confirmed what I had always rather suspected, that men are indeed colour-blind and dyed-in-the-wool conservatives.

The decorating was finished by placing motifs, mostly nursery rhyme scenes, in groups on the walls, and new lights were put in. When the floor was polished until it shone like a mirror and the ward was re-inhabited, the whole effect was delightful.

Our little patients did not let us down. As we moved them back, one after the other they clapped their hands and said it was a lovely ward—some of them even said they did not want to go home! David, aged three, however, kept very quiet and when asked if he liked the new ward very emphatically said "No".

We have now settled in very happily, and most people appreciate the colours we have chosen, especially when the sun shines and makes the ward look brighter than ever. I feel that we, who have ventured to break away from the traditional hospital colours, have won, particularly as even most of the medical staff have now been converted.

MARGARET E. MCDERMOTT,
Ward Sister, Hospital of St. Cross, Rugby.

News in Brief

PRINCESS MARGARET is to meet nurses of Queen Alexandra's Royal Army Nursing Corps at a cocktail party to be held at the Royal College of Surgeons on October 30.

NEITHROP AND PINES HOSPITALS, BANBURY.—Miss B. McLoughlin, S.R.N., S.C.M., at present assistant matron at Tehidy Chest Hospital, Camborne, has been appointed matron.

FIELD-MARSHAL EARL ALEXANDER OF TUNIS visited on September 30 the war cemetary in Cassino, Italy, to unveil a memorial to 4,068 British and Commonwealth soldiers and seven British nurses who were killed in the Italian and Sicilian campaigns in the Second World War and who have no known graves.

MATRON OF WELLINGTON HOSPITAL, SOMERSET, Miss Gladys Leach was presented with an inscribed gold wrist-watch and a cheque for £400 by former patients on her retirement after 25 years' matronship.

R.S.H. CHAIRMAN.—At a meeting of the Council of the Royal Society of Health Professor Harold Burrow was installed as chairman of Council for 1956-57. He succeeds Dr. Albert Parker, C.B.E. Professor Burrow is the first veterinary surgeon in the 80 years history of the Society to occupy this position.

WAKEFIELD 'A' GROUP HOSPITAL MANAGEMENT COMMITTEE is to explore the possibility of sending three representatives to Spain on a recruiting campaign for student nurses for the Clayton, General and Snapethorpe Hospitals, near Doncaster.

A NEW £9,144 PHYSIOTHERAPY DEPARTMENT was recently opened at Paulton Memorial Hospital by the chairman of the National Coal Board, Mr. James Bowman.

PHYSICIAN TO VISIT POLAND.—At the invitation of the Polish Ministry of Health, Dr. R. H. Dobbs, physician in the Children's Department of the London Hospital, is visiting Poland from October 19 to 29. He will join Sir Robert Macintosh and Professor Ian Aird in Warsaw.

NATIONAL HOSPITAL SERVICE RESERVE No. 8 Area Joint Committee in Bradford, because of a shortage of trained nurses on the reserve, is to publicize a 48-hour refresher course for nurses who have left the profession. After taking the course the trained nurse would be on call in emergency.

HERE and THERE

S.E.A.N. COURSE

A REFRESHER course arranged by the South Western Regional Hospital Board was held recently in Bristol. The first of its kind to be arranged on a regional basis, it was attended by 130 State-enrolled assistant nurses, 70 of whom were resident.

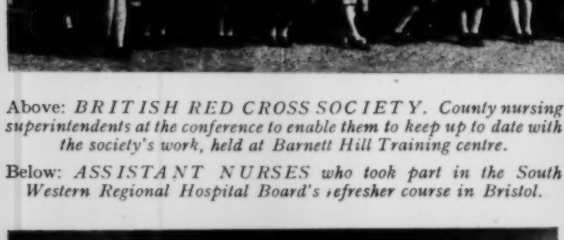
At the opening session the nurses were welcomed by Mr. H. M. Scott, chairman of the Board's Nursing Services Committee, who introduced Dr. G. C. Kelly, senior administrative officer of the board. In his talk Dr. Kelly referred to the great need for nursing staff and stressed the important part which the State-enrolled assistant nurse has to play in the National Health Service. Dr. Kelly also expressed the board's appreciation of the excellent service being given by State-enrolled assistant nurses throughout the region.

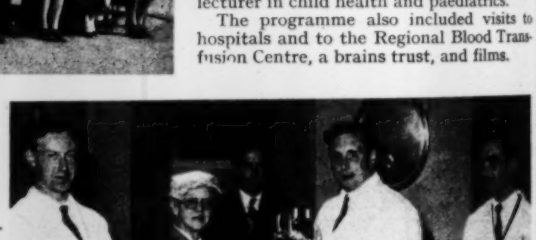
During the course, talks were given on the following subjects: 'The Blood Transfusion Service', by Dr. N. F. W. Brueton, deputy director, South Western Regional Transfusion Service; 'The Place of the State-enrolled Assistant Nurse in the Geriatric Service', by Dr. T. S. Wilson, geriatrician, Barncoose Hospital, Redruth, Cornwall; 'Food in Health and Illness', by Miss E. Washington, senior adviser on catering and dietetics, Ministry of Health; 'Aspects of Nursing Care of Children', by Dr. T. E. Oppe, lecturer in child health and paediatrics.

The programme also included visits to hospitals and to the Regional Blood Transfusion Centre, a brains trust, and films.

Above: *BRITISH RED CROSS SOCIETY. County nursing superintendents at the conference to enable them to keep up to date with the society's work, held at Barnett Hill Training centre.*

Below: *ASSISTANT NURSES who took part in the South Western Regional Hospital Board's refresher course in Bristol.*





Above: *SOCIETY OF REGISTERED MALE NURSES East Lancashire Branch third annual practical nursing contest. Members of the Stanley Royd Hospital, Wakefield, team, receive the trophy for the senior section.*

Royal College of Nursing

Public Health Section

Public Health Section within the Liverpool Branch.—A whist drive will be held at Carnegie Welfare Centre, Arrad Street, on **Monday, November 5,** at 7.15 p.m. Programmes, 2s. 6d., obtainable from Miss M. S. Fox, 80, Langton Road, Liverpool, 15.

Branch Notices

Worthing and South-West Sussex Branch.—Visit to Chailey Heritage on **Wednesday, October 31**: charge 4s., assemble Worthing Hospital, 12.30 p.m. Please let the secretary know if you wish to come by Monday, October 29.

Yorkshire Branch at Leeds.—A general meeting to hear the report of the Branches Standing Committee meeting will be held at the General Infirmary at Leeds on **Tuesday, November 13,** at 7.30 p.m.

New Section, Perth

At a meeting at Perth Royal Infirmary, on October 4, it was decided to form a Ward and Departmental Sisters Section within the Perthshire Branch. Officers were appointed as follows: chairman—Miss E. Watson, Bridge of Earn Hospital; secretary—Miss P. M. M. Mackintosh, Perth Royal Infirmary; treasurer—Miss M. Kerr, Perth Royal Infirmary.

All ward and departmental sisters within the Perthshire Branch who are interested in the Section are asked to contact the secretary.

Occupational Health Section, East Midland Area

The fifth East Midland area meeting and conference was held at Nottingham General Hospital on October 13. Seventy people were present, 33 of whom stayed for the area meeting and the afternoon session. These occupational health nurses represented several large firms in the Midlands, the majority coming from the National Coal Board, Boots Pure Drug Co. Ltd., Rolls Royce Co. Ltd., and the Stanton Iron Works Co. Ltd. Morning coffee and afternoon tea was provided in the pleasant hall.

The first speaker, Mr. D. Wynn-Williams, M.S., F.R.C.S., surgeon-in-charge, Plastic Unit, Nottingham City Hospital, had everyone fascinated when he spoke of 'Modern Trends of Plastic Surgery' and illustrated his talk with slides showing many operations on children for hare lip and other congenital deformities, and on adults for burns, carcinoma and cosmetic reasons. Mr. W. D. Fraser, M.B., CH.B., radiotherapist-in-charge, Hogarth Radiotherapeutic Centre, Nottingham General Hospital, then gave a talk on 'The Use of Radioactive Isotopes in Medicine' which was also illustrated by slides. He dealt with this most difficult subject in language which all could understand.

Miss M. L. Wenger, D.N.(LOND.), editor, *Nursing Times*, in her talk entitled 'Producing a Nursing Journal' said that in the early days of selection of women to train as nurses one hospital required them to be able to "read and write, and read writing". She felt that many nurses today still did not read or write enough. She outlined the work involved before the journal was 'put to bed'.

Mrs. I. G. Doherty, who spoke at the area meeting, gave a résumé of College activities and of the various bursaries offered by the college to occupational health nurses. The meeting ended with a vote of thanks by Miss D. A. Pemberton to all concerned, especially to Miss M. C. Plucknett, matron, for the excellent facilities available and the hospitality given to the Occupational Health Section.

ROYAL COLLEGE OF NURSING
HEADQUARTERS, LONDON:
Henrietta Place, Cavendish Sq., W.1

BELFAST: 6, College Gardens

Bedford Study Day

"Studying together is a very stimulating experience", commented the Hon. Romola Russell, president of the Bedford Branch, when she welcomed students to the Branch study day at Bedford General Hospital (South Wing), on October 8.

This was the third such study day to have been held in Bedford, and the nurses and midwives attending received lecture demonstrations on a variety of subjects. The morning session, for which Dr. M. D. C. Horsford, consultant anaesthetist, Bedford General Hospital, acted as chairman, was devoted to cardiac surgery, the lecturer being Mr. C. E. Drew of the Westminster Hospital.

After lunch Dr. W. C. V. Brothwood, county medical officer of health, presided for a talk by Miss F. N. Udell, chief nursing officer, Colonial Office, on some aspects of the work in the Colonial Nursing Service. The two remaining lectures were on 'Diabetes Mellitus', by Dr. G. A. Metcalfe, senior physician, Bedford General Hospital, and 'Genito-Urinary Disorders', by Mr. I. H. Griffiths, The Middlesex Hospital.

The arrangements for the study day were in the hands of a special sub-committee.

Glasgow Branch Dinner

Into what splendour were the members and friends of the Glasgow Branch ushered to take part in the most enjoyable dinner and ceilidh which was held in the banqueting hall of the Glasgow City Chambers on October 9!

The Lord Provost and Lady Provost; Councillor Mrs. Mary McAlister, president of the Branch; Miss G. M. Godden, O.B.E., president of the College; Dr. Nora Wattie; Mrs. Kier-Watson, chairman of the Branch; Miss Stewart, secretary, Scottish Board; Miss J. Armstrong, vice-chairman, Scottish Board; Miss Milroy, area organizer; Mrs. Childs, secretary, Glasgow, and Miss E. Hodge, treasurer, formed the platform party. Also among those present were two student nurses invited by the Branch, and members from Argyll, Dumfries, Dunfermline, Brechin, Stirlingshire, Renfrewshire and Lanarkshire.

Miss Stewart proposed the toast to the City of Glasgow giving a brief outline of all the amenities offered by the 'City Fathers'. In reply the Lord Provost said it was the first time he had returned thanks without any ensuing argument. Mrs. McAlister then proposed the toast to the Royal College of Nursing. She emphasized the importance of every nurse being a member of her own professional organization.

Great applause expressed appreciation of the honour conferred on nursing by the appointment of Miss F. G. Goodall as chairman of the Whitley Council. It was with great pleasure that members learned of Dr. Nora Wattie's honour in being appointed the first woman president of the Royal Sanitary Association of Scotland.

Miss Godden replied to this toast. She brought to the Glasgow Branch the College's sincere greetings and was happy to be able to come across the Border for this unusual opening meeting of the 1956-1957 session.

Miss Keachie, supervisor of health visitors for Glasgow, proposed the vote of thanks to Mrs. McAlister. The company enjoyed the haunting songs of the ceilidh provided by Miss Mary McNiven, Mr. Angus McLeod, Mr. Matthew Nesbitt, assisted by accompanist Mr. Hugh Martin and Mr. Donald McRitchie, who was chairman of the ceilidh. The Kelvingrove Ceilidh Band maintained musical interest with their rousing airs. A most satisfying, sociable and happy evening.

GLASGOW BRANCH dinner and ceilidh. Guests chatting to the master of ceremonies.

≈ *College Christmas Card* ≈

The College Christmas card this year contains a photograph of Queen Elizabeth the Queen Mother taken when she visited the 'Horse to Helicopter' Fair held in the grounds of Marlborough House this summer in aid of the Royal College of Nursing appeal fund. Her Majesty is seen, in a charmingly informal picture, leaving the gypsy caravan which was one of the features of the fair. The Christmas card bears the College crest printed in dark blue on the front; inside is the greeting "With all good wishes for Christmas and the New Year", with plenty of space for the sender's signature or for overprinting. The cards cost 8d. each

CHESTERFIELD MEMBERS

recently paid a visit to a coalmine; they went underground at Rambroft Colliery as one of a series of educational tours of local industry. Miss A. Parkinson, secretary of the Branch, remarked that as some Branch members often had to care for miners in hospital, it was very valuable to see for themselves the conditions under which they worked.

including envelope; orders for over one dozen, post free; postage 4d. on orders of less than one dozen.

* * *

We are asked to remind readers ordering the College pencils (which make attractive small Christmas gifts), that only orders for one dozen and upwards can be accepted by post; for smaller quantities than this postage and the necessary packing make it an uneconomic proposition. Single pencils can be obtained on calling personally.

ROYAL COLLEGE OF NURSING APPEAL

for the Nation's Fund for Nurses

Winter will soon be here and with it extra money will be needed for fuel. Will you please help now so that the extra help will be ready when the need arises. We acknowledge with many thanks the donations received this week.

Contributions for week ending October 20

	£	s.	d.

Coming Events

Central Middlesex Hospital, N.W.10.—The prizegiving will be held in the recreation room of the nurses home on Tuesday, October 30, at 3 p.m. Mme Eliahu Elath will present the awards.

Elizabeth Garrett Anderson Hospital Nurses' League.—The annual reunion will be held on Saturday, November 17, preceded by a service in the chapel at 3 p.m. There will be a bring-and-buy stall. R.S.V.P. to Sister Chapman, 40, Belsize Grove, London, N.W.3.

Joint Biology Committee.—*The Biological Applications and Effects of Nuclear Radiation*—a conference will be held in the Conference Hall, County Hall, Westminster Bridge, London, S.E.1, on Saturday, November 17. Admission 10s. Details from the British Social Biology Council, Tavistock House South, Tavistock Square, London, W.1.

Mile End Hospital.—A bring-and-buy sale, to be opened by Miss Rosalie Dreyer, will be held on November 2 at 2.30 p.m. All past members of the staff will be welcome.

St. Giles Hospital, S.E.5.—The annual bazaar will be held at the hospital on Thursday, November 1, from 2 to 6 p.m. All former members of the staff are invited.

St. Mary Abbots Hospital Nurses' League.—The autumn reunion will be held at the hospital on Saturday, November 3. Service in the chapel 2.30 p.m., league meeting 3 p.m., followed by tea. All former members of the staff are cordially invited. R.S.V.P. to the secretary, Nurses' League.

Appointments

Glasgow Royal Infirmary

MISS J. M. DODDS, R.G.N., S.C.M., R.F.N., S.T.CERT., who has recently returned from Australia, has been appointed PRINCIPAL SISTER TUTOR in the preliminary training school. Miss Dodds trained at the Belvidere Fever Hospital, Glasgow, Royal Infirmary, Glasgow, and the Maternity Hospital, Bellshill. Her nursing experience includes posts as ward sister and night sister, City Hospital, Aberdeen, district nurse, Armadale, home sister and assistant matron, Glenlomond Sanatorium, sister tutor at Glasgow Royal Infirmary, principal sister tutor, Royal Aberdeen Hospital for Sick Children. She has also had experience as a tutor and as ward sister in Australian hospitals, and has since been sister tutor at Aberdeen Royal Infirmary and associated hospitals.

Obituary

Miss P. Richards

We regret to announce the death of Miss Priscilla Richards, late matron of St. Anne's Orchard, Malvern, Worcestershire. Miss Richards trained at Victoria Hospital, Swindon, and after a year at Cheltenham Eye and Ear Hospital became a staff nurse at Cheltenham General Hospital. She was for three years theatre sister at the Birmingham Ear, Throat and Nose Hospital before taking a housekeeping course in London. After a short period as sister at Tunbridge Wells Eye Hospital, Miss Moore was appointed matron of the Birmingham Saturday Fund Convalescent Home, Malvern, and was later matron of the Birmingham Saturday Fund Hospital, Droitwich. Miss Moore was an active member of the Worcester Branch of the Royal College of Nursing.

NURSING SCHOOL NEWS

Left: *PRINCE OF WALES'S HOSPITAL, Tottenham. Prizewinners with Sir Graham Rowlandson.*

Below: *HAMMERSMITH HOSPITAL. Miss G. M. Godden, matron, and Dame Enid Russell-Smith with members of the teaching staff and prizewinners.*

Prince of Wales's General Hospital, Tottenham

SIR Graham Rowlandson, M.B.E., J.P., chairman of the health committee, Middlesex County Council, and recently appointed chairman of the North East Metropolitan Regional Hospital Board, presented the awards, from a wheelchair—he is an ex-polio patient who has not allowed this disability to interrupt a career of distinguished public service.

The silver medal was won by Miss M. P. Arnot; Miss P. Costigan won a prize for the best senior ward nurse (also a prize for ear, nose and throat nursing), and Miss E. Hyland for the best junior ward nurse.

Hammersmith Hospital

AT a delightful ceremony Dame Enid Russell-Smith, D.B.E., deputy secretary-elect to the Minister of Health, presented the awards. Miss G. M. Godden, O.B.E., matron, reviewed the satisfactory nursing recruitment position and examination results, also mentioning discussions now proceeding on two experimental training schemes which the hospital hoped to launch. Miss Godden reported that advisory tutors were being appointed to give guidance and advice throughout training to the 400 student nurses.

Dame Enid delighted her audience with a sparkling speech. Beginning with some witty sallies against herself as a civil servant, she turned to the serious side. "You may think that your education is now finished," she told the nurses, "but it has only just begun and will continue through the rest of your lives". One or two principles, Dame Enid suggested, might help to guide them: "Ask yourselves what are the nation's nursing needs. The days are past when nurses need only concern themselves about the patients in their own hospital. They must now organize for the needs of the whole community; a wider organization and wider loyalties are called for". The nursing profession would be called upon to organize itself for the needs which actually presented themselves—and the most urgent needs were not necessarily the most exciting or dramatic. Dame Enid felt convinced that as medicine progressed, the greatest fields of nursing service would lie in geriatric and mental health work—subjects in which there was great scope for development and discovery: "and there is much to be said for entering a sphere in which everything has not already been found out!"

Mrs. B. A. Gilbert (*née* Oldfield) was awarded the gold medal and the jubilee award for nursing; Miss J. Glendinning received the silver medal, and Miss J. S. Dixon the bronze medal.

Left: *SOUTHEND GENERAL HOSPITAL. Third from left in the front row is the Hon. Sir Henry Wynn Parry, who presented the awards. The Saunders silver medallists were Miss B. A. Truckenbrodt and Miss M. G. Dove.*

Right: *GREENOCK ROYAL INFIRMARY. Lady Lithgow (centre) presented the prizes. Miss M. B. Crighton, matron, is seated third from left.*

INDISPENSABLE

FOR WOUNDS, BURNS AND SKIN INFECTIONS

antipeol
CUTANEOUS OINTMENT

ANTIPEOL OINTMENT rapidly reduces inflammation. It contains the sterile broth filtrates of the most prevalent skin micro-organisms — staphylococcus, streptococcus, B. pyocyaneus — with a healing and soothing ointment base of lanoline, zinc and ichthammol.

ANTIPEOL is an invaluable and completely safe treatment for infectious conditions of the skin, mucous membranes and natural cavities.

The chief indications are: ABSCESSES, BOILS, BURNS, ECZEMA, ULCERS, IMPETIGO, HAEMORRHOIDS, SYCOSIS, WOUNDS AND ALL INFLAMMATORY CUTANEOUS INFECTIONS. ANTIPEOL LIQUID, the broth filtrate without the ointment base, is widely used for infections of the ear, for septic cavities and suppurating wounds.

Produced by the makers of:
ENTEROFAGOS *for intestinal complaints:*
RHINO-ANTIPEOL *for naso-pharynx infections:*
OPHTHALMO-ANTIPEOL *for ocular infections:*
DETENSYL *for reducing arterial tension.*

The CHARTERED SOCIETY of PHYSIOTHERAPY

(FOUNDED 1894. INCORPORATED BY ROYAL CHARTER, 9TH JUNE, 1920)
Patron: HER MAJESTY THE QUEEN
President: SIR CECIL WAKELEY, BT., K.B.E., C.B., LL. D., D.Sc., F.R.C.S.

The Chartered Society of Physiotherapy is a training and examining body in

REMEDIAL EXERCISES
MASSAGE AND ELECTRICAL TREATMENTS

The Society's Certificates are recognised by the Ministry of Health and the Department of Health for Scotland, the Ministry of Pensions, the Armed Services, the British Red Cross Society, the London County Council, Hospitals throughout the country, and other employing authorities.

Chartered Physiotherapists receive their training, including clinical experience, in schools attached to hospitals. They pledge themselves to treat patients only under medical direction, and do not advertise individually.

Full particulars of training and a list of recognised schools can be obtained from

THE SECRETARY
CHARTERED SOCIETY OF PHYSIOTHERAPY
Tavistock House (South), Tavistock Square, London, W.C.1

"My husband said I was a wet blanket"

"My husband said I was a regular wet blanket. Always 'like that' just when there was a tennis party, a theatre or some important business function, to which we had both been invited. He said I cramped his style and must do something about it. I did. I took two Anti-Kamnia tablets the next time my periodical pains appeared and experienced instant relief. Now I can go anywhere at any time, and by looking my best I do my husband credit."

There is nothing better than Anti-Kamnia for women who suffer badly from these periodical pains and headaches. It is a unique formula, containing no aspirin, and is especially good for the immediate relief of these distressing symptoms. Cannot affect the heart or digestion, but quickly soothes away all pain. Two Anti-Kamnia tablets are usually sufficient to bring immediate, sweet relief. Just ask your chemist for "A-K." tablets.

If you are a trained nurse, dedicate your service to the soldiers of the Queen. In return you will know adventure, travel, and the prestige of a commission. There is unlimited scope in Q.A.R.A.N.C. for advancement in many spheres in the profession, as well as to higher rank in the corps itself. Your service may take you to Singapore, Malaya, Hong Kong, Japan, Africa, Gibraltar, Bermuda, Malta, Jamaica, Germany, or on troopships. Write to the address below for illustrated leaflet giving full details of the opportunities that await you.

QUEEN ALEXANDRA'S ROYAL ARMY NURSING CORPS

TEXTBOOK OF HUMAN ANATOMY

By Professors J. D. BOYD, SIR WILFRED E. Le GROS CLARK, W. J. HAMILTON (Editor), J. M. YOFFEY, SIR SOLLY ZUCKERMAN, and the late A. B. APPLETON.

The aim of the six distinguished anatomists who have written this new work is to provide a textbook that takes into account the great changes which have occurred in recent years in both orientation and content of anatomical teaching.

In attempting to integrate factual data with functional considerations, the arrangement of the book differs in some important respects from other standard textbooks. For example, the bony elements of the skeleton are considered in the same section with the joints and muscles, so that the student approaches the study of the locomotor system as a whole.

Without sacrificing any of the topographical information which will always be essential for the non-specialist medical practitioner, this book covers the field of anatomical knowledge which the medical student is expected to have acquired by the end of his pre-clinical course.

While designed primarily for medical students, it is also suitable for students of physiotherapy, radiotherapy, dentistry, physical education, as well as biologists generally.

1,040 pages $10\frac{1}{2} \times 7\frac{5}{8}$ inches Printed on art paper

Profusely illustrated with drawings (most of them in colour) by A. K. Maxwell and Frank B. Price, and micro-photographs. £5

MACMILLAN & CO LTD
